

INVESTMENT POLICY OF THE FUND

MARKET SUMMARY

The defining event of the month was the outbreak of armed conflict between the U.S. and Iran on February 28, which fundamentally reshaped the global risk landscape. The closure of the Strait of Hormuz—the most important transit route for oil and natural gas in the Middle East—and the mutual strikes against energy infrastructure painted a picture of a stagflationary scenario. The S&P 500 index ended March, down nearly 7%, marking the global stock market's largest monthly decline since 2022. The technology sector led the correction, while energy and defense stocks showed relative strength. The Fed, acting as the central bank, left the benchmark interest rate unchanged; however, the previously priced-in rate cut disappeared, and the 10-year yield rose to near 4.4%. The Euro Stoxx 50, the benchmark for Europe, was also hit by high oil prices, with the index—which tracks the share prices of the largest companies—falling 10%. In line with this, the EU warned that if the price of Brent crude oil, the benchmark for the continent, remains around \$100 per barrel, inflation could rise above 3%, and GDP growth could fall short of the 1.4% forecast by as much as 0.4 percentage points. The European Central Bank has found itself in an extremely difficult position, as the energy price shock is hitting Europe proportionally harder than the U.S., making market pricing regarding interest rate policy divergence unsustainable. Airlines, the auto industry, and the luxury goods sector suffered the most, while energy and defense stocks were positive outliers.

In March, investor sentiment on international capital markets was shaped by the unfolding conflict in Iran and the resulting uncertainty in the energy markets, which triggered significant selling in riskier asset classes. In this tense environment, the Central European region underperformed global benchmarks, with the Hungarian stock market lagging behind even within the region. The region's underperformance was largely driven by the dollar's strengthening during the month, fueled by both rising demand for the dollar due to higher oil prices and geopolitical escalation. The BUX index posted a return of -4.07% in forint terms and -8.23% in dollar terms during the month. Among the index components, MOL, which is active in the oil sector, performed the best; besides it, only Graphisoft Park managed to close in positive territory. The weakest performers were 4iG, CIG Pannónia, and Appeninn, but OTP, the index's most heavily weighted component, also suffered a significant drop of nearly 10%.

GENERAL INFORMATION

Fund Manager:	VIG Investment Fund Management Hungary
Custodian:	Unicredit Bank Hungary Zrt.
Main distributor:	VIG Investment Fund Management Hungary
Benchmark composition:	100% BUX Index
ISIN code:	HU0000727474
Start:	11/09/2021
Currency:	HUF
Net Asset Value of the whole Fund:	5,199,476,104 HUF
Net Asset Value of B series:	575,776,173 HUF
Net Asset Value per unit:	1.919357 HUF
