

INVESTMENT POLICY OF THE FUND

The aim of the Fund is to create an investment portfolio that achieves annualised capital growth for investors higher than the benchmark over a 3-year time horizon while achieving the Fund's Sustainability Objectives. With a view to achieving these objectives, the Fund may invest in a variety of instruments, i.e. it holds primarily equity and bond-type instruments, while it may also invest in collective securities and enter into derivative transactions, subject in each case to the relevant investment limits. The fund does not have a geographical specification. In order to realise the investment objectives, the asset groups in the Fund's portfolio may be varied freely, without having to adhere to a predetermined risk profile. The Fund's investment strategy is based on sustainable value creation, aiming to build an actively managed and sufficiently diverse portfolio that takes into account both sustainability criteria and the fundamentals of the assets held. The Fund's asset allocation strategy is based on the asset allocation model used by the Fund Manager, the Investment Clock, used by the Fund Manager to determine the asset mix with the best risk to return potential at a given point of the economic cycle. In addition to asset allocation, the Fund Manager aims to achieve the financial and sustainability objectives of the Fund through active stock and bond selection policies. Stock selection is based on sustainable growth, through the selection of stocks of companies able to achieve outstanding performance both financially and in terms of ESG risks, thus creating long-term shareholder value. When selecting bonds, the Fund Manager seeks to maximise the proportion of green bond issues, taking into account existing market constraints.

MARKET SUMMARY

The defining event of the month was the outbreak of armed conflict between the U.S. and Iran on February 28, which fundamentally reshaped the global risk landscape. The near-total closure of the Strait of Hormuz—the most important transit route for oil and natural gas in the Middle East—and the mutual strikes against energy infrastructure painted a picture of a stagflationary scenario. The S&P 500 index ended March down nearly 7%, marking the global stock market's largest monthly decline since 2022. The technology sector led the correction, while energy and defense stocks showed relative strength. The Fed, acting as the central bank, left the benchmark interest rate unchanged; however, the previously priced-in rate cut disappeared, and the 10-year yield rose to near 4.4%. The Euro Stoxx 50, the benchmark for Europe, was also hit by high oil prices, with the index—which tracks the share prices of the largest companies—falling 10%. In line with this, the EU warned that if the price of Brent crude oil, the benchmark for the continent, remains around \$100 per barrel, inflation could rise above 3%, and GDP growth could fall short of the 1.4% forecast by as much as 0.4 percentage points. The European Central Bank has found itself in an extremely difficult position, as the energy price shock is hitting Europe proportionally harder than the U.S., so in our view, the market pricing regarding interest rate policy divergence is unsustainable. Airlines, the automotive industry, and the luxury goods sector suffered the most, while energy and defense stocks were positive outliers. Turbulence in the equity and bond markets also put pressure on the Fund's net asset value, causing it to suffer a slight decline in March despite the fact that we significantly reduced our equity weighting at the beginning of the month. We also reduced our holdings of Central and Eastern European and developed European equities, and opened short positions in the S&P 500 and Nasdaq. However, our hedged currency exposure, as well as our regional and European bond exposure, eroded returns; additionally, on the equity side, we incurred losses in gold mining companies and in Hungarian and Polish stocks. By the end of the month, however, we had already begun selectively increasing the weight of risky assets again. In April, the focus will likely be on the developments in the Iranian conflict and the trajectory of oil prices; a potential ceasefire could bring about a rapid market turnaround, while further escalation could heighten stagflation risks. In addition, the first-quarter earnings season will begin, which may provide a fresh perspective on the earnings outlook for companies with AI exposure. The Fed's interest rate decision at the end of April could be decisive, particularly in light of how the energy price shock is feeding into inflation data.
