

VIG Developed Market Short Term Bond Investment Fund

U series USD MONTHLY report - 2026 MAY (made on: 05/31/2026)

INVESTMENT POLICY OF THE FUND

The aim of the Fund is to increase the euro savings held in the Fund, while assuming low interest-rate and credit risk. The Fund mainly buys short-term, euro-denominated bonds of investment-grade issuers, and aims to generate a return for investors through interest income and price gains on them. The Fund Manager invests the savings held in the Fund in short-term bonds denominated in euros. The Fund Manager assumes a low interest-rate risk; the modified duration of the portfolio is more than 6 months, but may not be higher than 2.5 years. The Fund also follows a cautious strategy in terms of assuming credit risk, investing a maximum of just 10% of its assets in bonds of non-investment grade or non-credit rated issuers. The Fund primarily invests in developed-market government securities, but this can also be supplemented by credit-institution, corporate and/or municipal bonds, as well as by term deposits and repo transactions. The Fund can also invest a small part of its portfolio in emerging markets. In addition, the Fund may invest in collective investment forms, and can fine-tune the design of its portfolio through the use of derivatives (stock-exchange and OTC transactions). The Fund invests exclusively in securities denominated in euros, and may hold currency assets in bank deposits or bank accounts only for the purpose of liquidity management and currency hedging. It is not possible to make individual investor decisions in the Fund. No individual investor's decisions can be made in the Fund.

MARKET SUMMARY

Over the past month, global capital markets have been shaped by two main themes: the renewed acceleration of the AI infrastructure investment cycle and the energy and geopolitical risks associated with the conflict involving Iran. The artificial intelligence narrative continued to drive the semiconductor sector sharply higher. The Philadelphia Semiconductor Index (which tracks the average share price performance of the 30 largest semiconductor companies listed on U.S. exchanges and engaged in semiconductor design, manufacturing, distribution, and sales) has only traded this far above its 200-day moving average twice before: in 1995 and at the peak of the 2000 tech bubble. Analysts have consistently revised upward their capital expenditure (capex) forecasts for AI-related companies. At the same time, an increasing share of these investments is being financed through debt. Meanwhile, the energy price shock is weighing heavily on the macroeconomic outlook. Inflation readings for April and May came in consistently above expectations. Expectations for interest rate cuts have largely disappeared, and market participants are increasingly pricing in the possibility of rate hikes instead. A June rate hike by the European Central Bank has become increasingly likely, although wage growth has so far remained under control. The automotive sector, which plays a key role in the economy, presents a mixed picture. Overall vehicle sales have been on an upward trend for three consecutive months, while the electric vehicle (EV) market continues to expand. The technical ratification of the EU–US trade agreement was completed at the end of May, although the effective tariff levels applicable to several sectors remain the subject of ongoing negotiations and debate.

In May, European bond yields showed smaller movements than in previous months. Further yield increases were observed primarily at the shorter end of the maturity spectrum, reflecting growing market confidence that the European Central Bank (ECB) will begin raising interest rates. Headline inflation in the euro area rose to 3.2% in May, and investors expect the ECB to implement two to three 25-basis-point rate hikes this year. Regarding portfolio composition, during the past month we exchanged the shortest-maturity Portuguese government bonds for Portuguese bonds with a five-year maturity in order to capture the additional yield available along the yield curve.

GENERAL INFORMATION

Fund Manager:	VIG Investment Fund Management Hungary
Custodian:	Raiffeisen Bank Zrt.
Main distributor:	VIG Investment Fund Management Hungary
Benchmark composition:	Fund has no benchmark
ISIN code:	HU0000732045
Start:	10/03/2023
Currency:	USD
Net Asset Value of the whole Fund:	10,365,449 EUR
