

VIG Developed Markets Government Bond Investment Fund

EI series EUR MONTHLY report - 2026 MAY (made on: 05/31/2026)

INVESTMENT POLICY OF THE FUND

The objective of the Fund is to create a highly defensive investment portfolio for its Investors, which typically invests in developed-market government bonds and related exchange-traded derivatives. According to the intentions of the Fund Manager, the bulk of the Fund's portfolio is made up of bonds issued by foreign states and foreign companies through public offerings. With regard to foreign securities, the Fund only purchases publicly traded securities listed on a foreign stock exchange. It keeps the planned share of non-investment grade securities low. The proportion of bonds that can be held in the Fund at any given time may reach the prevailing legal maximum. In order to ensure liquidity, the Fund may purchase Hungarian government securities (primarily discount treasury bills) and MNB bonds. The Fund Manager has the option, at its own discretion, of hedging all or part of its foreign exchange risks using forward currency positions subject to observing the applicable legal requirements.

MARKET SUMMARY

Over the past month, global capital markets have been shaped by two main themes: the renewed acceleration of the AI infrastructure investment cycle and the energy and geopolitical risks associated with the conflict involving Iran. The artificial intelligence narrative continued to drive the semiconductor sector sharply higher. The Philadelphia Semiconductor Index (which tracks the average share price performance of the 30 largest semiconductor companies listed on U.S. exchanges and engaged in semiconductor design, manufacturing, distribution, and sales) has only traded this far above its 200-day moving average twice before: in 1995 and at the peak of the 2000 tech bubble. Analysts have consistently revised upward their capital expenditure (capex) forecasts for AI-related companies. At the same time, an increasing share of these investments is being financed through debt. Meanwhile, the energy price shock is weighing heavily on the macroeconomic outlook. Inflation readings for April and May came in consistently above expectations. Expectations for interest rate cuts have largely disappeared, and market participants are increasingly pricing in the possibility of rate hikes instead. A June rate hike by the European Central Bank has become increasingly likely, although wage growth has so far remained under control. The automotive sector, which plays a key role in the economy, presents a mixed picture. Overall vehicle sales have been on an upward trend for three consecutive months, while the electric vehicle (EV) market continues to expand. The technical ratification of the EU– US trade agreement was completed at the end of May, although the effective tariff levels applicable to several sectors remain the subject of ongoing negotiations and debate.

In May, the Hungarian forint strengthened by more than 2% against the U.S. dollar and by nearly 3% against the euro. As a result, the value of the hard-currency bonds held in the Fund declined further when expressed in forints. Yields on U.S. dollar-denominated bonds continued to rise over the past month, and with inflation rates increasing, a growing number of investors expect interest rate hikes in the United States this year. In the euro area, the market is clearly pricing in rate hikes as well, with the first 25-basis-point increase potentially occurring as early as June. Regarding the Fund's composition, we used available liquidity to purchase Serbian telecom bonds. In addition, we took advantage of the rise in UK government bond yields driven by domestic political risks in the United Kingdom and purchased bonds maturing in 2054.

GENERAL INFORMATION

Fund Manager:	VIG Investment Fund Management Hungary
Custodian:	Erste Bank Hungary Zrt.
Main distributor:	VIG Investment Fund Management Hungary
