

## INVESTMENT POLICY OF THE FUND

The primary objective of the Fund is sustainable investment, specifically to have a positive environmental impact. It seeks to go beyond mitigating environmental harm and aims to act as a catalyst for environmental change. While the Fund's primary environmental goal is climate change mitigation, it may also contribute to its sustainability objective through other environmental or social targets. Alongside sustainable investment, the Fund also targets capital growth. It primarily, though not exclusively, aims to achieve its goals through investments in equities and equity ETFs. To support its objective, the Fund may also invest in other transferable and equity-linked securities. The Fund Manager integrates sustainability risks and their management into the Fund's investment decision-making process. The Fund's goal is sustainable investment, and it thus falls under Article 9 of the SFDR regulation. The Fund does not apply geographical or sector-specific restrictions, allowing it to invest globally, including in emerging markets. It intends to reach its objectives mainly with equity-type assets, primarily but not exclusively through publicly traded shares, ETFs, and open-ended, public investment funds. The Fund's goal is sustainable investment, which it seeks to achieve mainly through a positive impact on environmental factors within the ESG universe. To this end, it plans to invest primarily in companies with a low ecological footprint, which contribute through their activities to solving global environmental issues-such as transitioning to a lower-carbon economy or adopting a circular economic model. The Fund invests mainly, though not exclusively, in companies significantly involved in energy efficiency, renewable and clean energy, pollution control, water supply and technology, waste management and recycling, sustainable agriculture and forestry, and the sharing economy. The Fund does not have a geographical focus, as environmental interests extend beyond normal economic cycles, encompassing generally global, long-term processes that affect the entire world. Since the Fund aims to benefit from long-term growth and has equity market exposure, it is recommended for investors (1) who seek to invest in securities without geographical limitations and are backed by companies that focus on environmental factors in their activities, (2) whose primary goal is sustainable investment, and (3) who have a high risk tolerance and are willing to accept significant fluctuations in the value of their investments. The asset manager has discretionary authority to decide, based on market conditions, whether to reduce currency risk in positions denominated in currencies other than the target currency by entering into hedging transactions. For efficient portfolio management, the exposure from derivative transactions may not exceed 30% of the Fund's net asset value.

## MARKET SUMMARY

Over the past month, global capital markets have revolved around two themes: one was the further acceleration of the AI infrastructure investment cycle, and the other was the energy and geopolitical risks associated with the war in Iran. The artificial intelligence story drove the semiconductor sector up at a strong pace, with the Philadelphia Semiconductor Index (an index of the 30 largest companies listed on U.S. stock exchanges) has only risen this much above its 200-day moving average in 1995 and at the peak of the 2000 bubble. Analysts are consistently revising AI companies' capex forecasts upward, yet an increasing portion of this financing is coming from debt. Meanwhile, the energy price shock is severely worsening the macroeconomic picture: inflation data for April and May were consistently higher than expected. Expectations of interest rate cuts have faded, and market participants now consider an interest rate hike more likely. A June interest rate hike by the European Central Bank is becoming increasingly likely, while wage dynamics have remained under control for now. The auto sector, which is key to the economy, presents a mixed picture: total sales have been on an upward trend for three months, and the EV market is expanding. The technical ratification of the EU- US trade agreement took place at the end of May, but the actual tariff rates in several sectors are still a matter of debate.

The Fund's focus areas presented a mixed picture this month. The structural thesis, based on the explosive growth in power demand from AI data centers, continued to gain traction. Leading renewable energy and grid operators reported expanding project portfolios and a surge in data center orders, while the stock of one of the industry's largest energy infrastructure providers has more than doubled over the past year on the back of AI-related demand. In the utilities sector, however, a new risk factor has come to the fore: rising residential electricity prices are triggering increasingly strong political pressure. Several policymakers have called on providers to keep rates stable or reduce them. In the renewable energy sector, the energy security narrative has remained a structurally supportive factor. The need for grid development and energy storage, driven by AI-driven electricity demand, remains part of the industry's core thesis. In the Fund, we maintained and further increased our exposure to grid infrastructure and energy storage during the month.

## GENERAL INFORMATION

Fund Manager:	VIG Investment Fund Management Hungary
Custodian:	Erste Bank Hungary Zrt.
Main distributor:	VIG Investment Fund Management Hungary
Benchmark composition:	Fund has no benchmark
ISIN code:	HU0000733365
Start:	07/03/2025
Currency:	CZK
Net Asset Value of the whole Fund:	2,088,357,609 HUF
Net Asset Value of CZKh-R series:	3,088,875 CZK
Net Asset Value per unit:	1.311211 CZK
