

INVESTMENT POLICY OF THE FUND

The aim of the Fund is to create an investment portfolio that achieves annualised capital growth for investors higher than the benchmark over a 3-year time horizon while achieving the Fund's Sustainability Objectives. With a view to achieving these objectives, the Fund may invest in a variety of instruments, i.e. it holds primarily equity and bond-type instruments, while it may also invest in collective securities and enter into derivative transactions, subject in each case to the relevant investment limits. The fund does not have a geographical specification. In order to realise the investment objectives, the asset groups in the Fund's portfolio may be varied freely, without having to adhere to a predetermined risk profile. The Fund's investment strategy is based on sustainable value creation, aiming to build an actively managed and sufficiently diverse portfolio that takes into account both sustainability criteria and the fundamentals of the assets held. The Fund's asset allocation strategy is based on the asset allocation model used by the Fund Manager, the Investment Clock, used by the Fund Manager to determine the asset mix with the best risk to return potential at a given point of the economic cycle. In addition to asset allocation, the Fund Manager aims to achieve the financial and sustainability objectives of the Fund through active stock and bond selection policies. Stock selection is based on sustainable growth, through the selection of stocks of companies able to achieve outstanding performance both financially and in terms of ESG risks, thus creating long-term shareholder value. When selecting bonds, the Fund Manager seeks to maximise the proportion of green bond issues, taking into account existing market constraints.

MARKET SUMMARY

Over the past month, global capital markets have revolved around two themes: one was the further acceleration of the AI infrastructure investment cycle, and the other was the energy and geopolitical risks associated with the war in Iran. The artificial intelligence story drove the semiconductor sector up at a strong pace, with the Philadelphia Semiconductor Index (an index of the 30 largest companies listed on U.S. stock exchanges) has only risen this much above its 200-day moving average in 1995 and at the peak of the 2000 bubble. Analysts are consistently revising AI companies' capex forecasts upward, yet an increasing portion of this financing is coming from debt. Meanwhile, the energy price shock is severely worsening the macroeconomic picture: inflation data for April and May were consistently higher than expected. Expectations of interest rate cuts have faded, and market participants now consider an interest rate hike more likely. A June interest rate hike by the European Central Bank is becoming increasingly likely, while wage dynamics have remained under control for now. The auto sector, which is key to the economy, presents a mixed picture: total sales have been on an upward trend for three months, and the EV market is expanding. The technical ratification of the EU– US trade agreement took place at the end of May, but the actual tariff rates in several sectors are still a matter of debate.

The Fund performed well in May. The rebound in Central and Western European stock markets had a positive impact on the Fund's returns, and bond markets also managed to rise this time. Among regional equities, Magyar Telekom and Erste shares contributed most to the rise, while in developed markets, renewable energy companies—primarily solar energy firms—helped boost the Fund's returns. The Fund maintained a higher equity exposure than its long-term equity allocation during the month; in addition to CEE regional and European equities, we also took smaller positions in emerging markets and the U.S. market.
