

INVESTMENT POLICY OF THE FUND

The fund aims to profit from global megatrends that extend beyond economic cycles. Such trends may include demographic changes (ageing society, developing markets), efficiency gains due to scarce resources (renewable resources, energy efficiency), urbanisation, or even technological innovation. The fund aims to achieve its objectives through equity-type instruments, primarily exchange-traded funds (ETFs), equities and open-ended public investment funds. Megatrends are long-term changes that have a lasting impact on our social and economic environment. The fund aims to share in the profit growth of companies that could be winners in these processes. Megatrends are long-term processes that extend beyond normal economic cycles, are usually global and affect the whole world. Consequently, the fund does not have a geographical specification. As the fund aims to profit from long-term growth and has significant exposure to stock markets, it is recommended for risk-taking investors with a long-term investment horizon. The Fund holds its assets in euro. The Fund invests only in investments where the expense ratio remains below 2.5%, but always aims to keep the average fees charged on the underlying collective investment instruments below 1%. The fund also does not have a geographical specification, and thus no typical currency composition. The target currency of the Fund is therefore the settlement currency of the benchmark index (USD). Due to the strategy of the Fund, it may also invest in assets denominated in foreign currency. The Fund may hedge some or all of its foreign currency risk using forward currency positions against the target currency, i.e. the settlement currency of the benchmark (USD). The Fund Manager has a discretionary right to reduce the foreign currency risk of positions denominated in a currency other than the target currency, depending on market developments, by entering into hedge transactions. In addition, the use of equity and index futures is permitted in order to effectively build the Fund's portfolio.

MARKET SUMMARY

In May, as geopolitical tensions eased and energy prices plummeted, risk appetite returned strongly to the stock markets, resulting in a favorable month and strong performance for the Fund. Thematic, technology, and AI-exposed segments outperformed, while the energy sector corrected in the wake of sharply falling oil prices. At the end of the month, however, renewed hostilities between the U.S. and Iran, followed by a 60-day memorandum of understanding, reminded investors of the persistence of geopolitical risk. One of the month's most significant developments, affecting the Fund's entire thematic universe, was the unfolding wave of AI IPOs. SpaceX publicly filed its preliminary prospectus for a record-breaking IPO targeting a valuation of approximately \$1.75 trillion, with its debut expected in mid-June. The two leading AI labs, Anthropic and OpenAI, are also expected to go public before the end of the year. The capital requirements for building AI infrastructure are enormous, which companies are finding difficult to meet through the private market, so they are turning to the public stock market. This wave of capital raising has also spurred action among tech giants already listed on the stock market: Google's parent company, Alphabet, announced an \$80 billion stock offering to finance its AI investments. On the one hand, these offerings open new, direct investment opportunities in AI players that were previously only accessible indirectly; on the other hand, the inflow of fresh capital must find a source, which could temporarily cause a realignment in existing large technology positions. This could act as a headwind to the performance of the Magnificent 7 companies, in which investors are heavily concentrated. Market valuations remain at historically high levels, but sustained strong, double-digit corporate earnings growth could remain a supportive factor. The risk continues to lie in geopolitics. A lasting agreement could further ease monetary conditions, while a renewed escalation could threaten to bring inflationary pressures and a decline in risk appetite. In the Fund, we increased the overweight in the technology and AI infrastructure themes during the month, which have maintained their strong momentum in recent weeks.
