

INVESTMENT POLICY OF THE FUND

The Fund aims to achieve a higher return than that of short-term bonds by investing in bonds of low volatility and limited-risk profile issued or guaranteed by certain specified states, quasi-sovereign corporations, national banks or supranational institutions. The Fund invests most of its available assets in low-risk instruments, i.e. bonds issued or guaranteed by the Hungarian state or states with a credit rating at least equal to or better than the latter's latest rating (or by their debt management agencies), quasi-sovereign companies, national banks or supranational institutions. The Fund may hold bank deposits, or cash, and enter into repo and reverse repo transactions. The maximum interest rate risk with respect to the Fund as a whole (i.e. its duration) is 3 years, while the weighted average maturity of the individual securities is a maximum of 10 years. For bonds denominated in currencies other than Hungarian forint, the asset manager seeks to fully hedge the foreign exchange risk, and may only deviate from this at the expense of risky assets (i.e. in the case of foreign exchange under/over-hedging). The Fund uses a small portion of its available assets to purchase risky instruments - domestic and foreign equities, equity indexes, higher risk bonds, foreign exchange, commodity market products and collective investment securities on the spot and futures markets. The Fund may enter into both long and short trades. Based on the approach followed when purchasing risky assets, the Fund is an absolute return fund: it selects investment options with the best possible expected return/risk ratio from the options available to it on the domestic and international money and capital markets. There is no possibility for making individual investor decisions in respect of the Fund.

MARKET SUMMARY

Over the past month, global capital markets have been shaped by two main themes: the renewed acceleration of the AI infrastructure investment cycle and the energy and geopolitical risks associated with the conflict involving Iran. The artificial intelligence narrative continued to drive the semiconductor sector sharply higher. The Philadelphia Semiconductor Index (which tracks the average share price performance of the 30 largest semiconductor companies listed on U.S. exchanges and engaged in semiconductor design, manufacturing, distribution, and sales) has only traded this far above its 200-day moving average twice before: in 1995 and at the peak of the 2000 tech bubble. Analysts have consistently revised upward their capital expenditure (capex) forecasts for AI-related companies. At the same time, an increasing share of these investments is being financed through debt. Meanwhile, the energy price shock is weighing heavily on the macroeconomic outlook. Inflation readings for April and May came in consistently above expectations. Expectations for interest rate cuts have largely disappeared, and market participants are increasingly pricing in the possibility of rate hikes instead. A June rate hike by the European Central Bank has become increasingly likely, although wage growth has so far remained under control. The automotive sector, which plays a key role in the economy, presents a mixed picture. Overall vehicle sales have been on an upward trend for three consecutive months, while the electric vehicle (EV) market continues to expand. The technical ratification of the EU- US trade agreement was completed at the end of May, although the effective tariff levels applicable to several sectors remain the subject of ongoing negotiations and debate.

The Fund's net asset value increased by nearly 1% in May. The increase was primarily driven by the continuation of positive market momentum following the domestic elections. Hungarian bond yields continued to decline, from which the Fund benefited significantly. As bond prices appreciated, we gradually continued to reduce the portfolio's interest-rate risk. Among its riskier positions, the Fund maintains meaningful exposure to shares of companies involved in the development of electricity grids and electrical infrastructure, as well as exposure to the Japanese equity market.
