

INVESTMENT POLICY OF THE FUND

The objective of the investment fund is to make the Polish bond market accessible to the investors, and to function as a relatively stable, medium-risk investment form bringing steady real yields to our Clients on middle term already, without having to tie down their money for a fixed period of time. The Fund mainly invests in Polish government securities issued in zloty, however, the portfolio manager has some room to complement the portfolio with other bond-type investments. Our goal is to achieve the highest yield while taking the lowest risk. To make investment decisions we use the tools of both fundamental and technical analysis, and we take into consideration the investor sentiment on the markets at all times. The portfolio manager seeks out potential investment opportunities based on the macro-economical expectations, the expected yield curve, the return expected on the curve and the market volatility, and selects investments that are considered to be safe and bring relatively high yields in exchange for the risks taken. The Fund strives for complete exchange risk coverage of foreign currency exposure for the target currency.

MARKET SUMMARY

The performance of the bond markets continued to be driven by the Iranian conflict that broke out at the end of February and has persisted ever since. Throughout the month, statements by Donald Trump aimed at ending the war repeatedly put downward pressure on oil prices; however, a lasting peace agreement has yet to be reached between the two sides. As a result, Polish bond yields remained volatile during the month. By month-end, however, one-year yields had fallen by 15 basis points, three-year yields by 19 basis points, and ten-year yields by 13 basis points. The market is currently pricing in three interest rate hikes for 2026. At its monetary policy meeting in early May, the Polish central bank left its key policy rate unchanged at 3.75%. While the communication was somewhat more hawkish, policymakers continue to maintain a wait-and-see approach. According to preliminary data, inflation unexpectedly declined from 3.2% to 3.1% in May, mainly due to lower food prices. Industrial production expanded by 3.1% in the fourth month of 2026. Retail sales also remained positive but fell short of expectations, recording year-on-year growth of 1.3%. Due to the geopolitical situation, uncertainty remains elevated, and the outcome of the war is still far from clear. We used the higher bond yields to buy longer dated government bonds.
