

INVESTMENT POLICY OF THE FUND

The Fund's aim is to function as a stable, low-risk form of investment, while providing investors with higher returns than they could expect from bank deposits. In order to ensure liquidity, the Fund intends primarily to hold in its portfolio government bonds and discount treasury bills issued by the Government Debt Management Agency (ÁKK) and bonds issued by the National Bank of Hungary (MNB). The weighted average maturity (WAM) of the assets in the portfolio may not exceed 6 months and the weighted average life (WAL) of the assets may not exceed 12 months. The Fund may hold in its portfolio low-risk debt securities issued by banks and companies, which are expected to provide higher returns than government securities and are denominated primarily in HUF but also in other currencies. The Fund may also invest to a limited extent in government securities or guaranteed bonds issued by the OECD or a G20 country, or any debt security issued or guaranteed by the central government or a regional or local government or the central bank of any EU Member State, or by the European Union, the European Central Bank or the European Investment Bank. The weighted average maturity (WAM) of the assets in the portfolio may not exceed 6 months and the weighted average life (WAL) of the assets may not exceed 12 months. In addition, the remaining time to maturity of each security is a maximum of 2 years and a maximum of 397 days until the nearest interest-rate determination date. The Fund may also keep its liquid assets in bank deposits. The fund may hold a limited amount of foreign currency assets in its portfolio, but only subject to the full hedging of currency risk.

VIG Moneymarket Fund is not a guaranteed investment. The risk of loss of the principal is to be borne by the investor. An investment in VIG Moneymarket Fund is different from an investment in deposits, with particular reference to the risk that the principal invested in VIG Moneymarket Fund is capable of fluctuation. VIG Moneymarket Fund does not rely on external support for guaranteeing the liquidity of the fund or stabilising the NAV per unit or share.

MARKET SUMMARY

The ceasefire signed between Iran and the United States in June proved to be short-lived, as tensions in the Middle East escalated once again in mid-July. Following the relative calm seen after the June agreement, missile, drone, and maritime attacks resumed on a regular basis. The Strait of Hormuz remained the focal point of the conflict. Global oil prices rose significantly again during the month, although they remained well below the previous peak. Diplomatic efforts took a back seat, although mediation attempts periodically emerged, eventually contributing to some normalization in oil prices. As a result, Hungarian government bond yields mostly moved higher during the month. Yields declined only at the one-year maturity, while the rest of the yield curve moved significantly higher. Three-year yields increased by 45 basis points, while the ten-year maturity saw a rise of 55 basis points. In July, the Monetary Council cut the policy rate by 25 basis points as expected, bringing the base rate down to 5.75%. The easing cycle may continue in August, followed by a comprehensive assessment of the situation in September, after which further policy decisions will be made. According to preliminary data, GDP growth reached 1.7% year-on-year in the second quarter, slightly below market expectations. Consumption likely remained the main driver of growth, while according to data from the Hungarian Central Statistical Office, industrial activity may also have made a positive contribution. Inflation in July arrived significantly below market expectations, year on year data was 1.2%.
