

# VIG POLAND LARGE CAP EQUITY FUND

PLN-IP series PLN

MONTHLY report - 2026 JULY (made on: 07/31/2026)

## INVESTMENT POLICY OF THE FUND

The Fund aims to share in the returns of the Polish stock market, and to profit from Polish economic growth through stock prices and dividend income. In accordance with the risk characteristics of equity investments, the Fund qualifies as a high-risk investment. According to the Fund Manager's intentions, the bulk of the Fund's portfolio is made up of the shares of foreign companies issued through public offerings. The primary investment targets are the securities, traded on the stock exchange or about to be listed on the stock exchange, of companies that operate in Poland or that derive a significant portion of their revenues from Poland, or whose shares are listed on the Warsaw Stock Exchange. The Fund may also invest in equities of other Central and Eastern European companies (Austria, Czech Republic, Hungary, Russia, Romania and Turkey). When developing the portfolio, the shares determine the nature of the Fund, and thus the proportion of shares that can be held in the Fund at any given time may reach the prevailing legal maximum. The Fund holds more than 30% of its assets in currencies other than the local currency (HUF).

## MARKET SUMMARY

July was a milestone month for Polish stocks, as they posted their strongest July performance since the recovery from the financial crisis in 2009: they achieved a total return of 9.34% in PLN and 11.82% in HUF. This represents a significant acceleration compared to global stock indices, which yielded a return of just 2.11% in forint terms over the same period. Within the Central European region, the Polish market recorded the second-largest gain behind Romania's, significantly outperforming the Hungarian and Czech markets. The rally was supported by robust domestic economic growth, rising commodity prices that bolstered earnings expectations in the energy sector, and strong net capital inflows into Polish investment funds, which attracted 5.05 billion PLN in June alone ahead of the July rally. Orlen was among the biggest contributors to the performance, as rising oil prices improved the energy company's earnings outlook. Allegro continued its strong momentum, which has been ongoing since March, thanks to growth in e-commerce. The main negative factor was KGHM, which weakened due to commodity-specific headwinds, while Budimex and mBank also made negative contributions. The Fund maintained a 105% net equity exposure, supporting its relative performance during the market rally. In particular, the overweight positions in Pepco and XTB shares contributed significantly to the Fund's outperformance in July.
