

INVESTMENT POLICY OF THE FUND

The Fund's aim is to function as a stable, low-risk form of investment, while providing investors with higher returns than they could expect from bank deposits. In order to ensure liquidity, the Fund intends primarily to hold in its portfolio government bonds and discount treasury bills issued by the Government Debt Management Agency (ÁKK) and bonds issued by the National Bank of Hungary (MNB). The weighted average maturity (WAM) of the assets in the portfolio may not exceed 6 months and the weighted average life (WAL) of the assets may not exceed 12 months. The Fund may hold in its portfolio low-risk debt securities issued by banks and companies, which are expected to provide higher returns than government securities and are denominated primarily in HUF but also in other currencies. The Fund may also invest to a limited extent in government securities or guaranteed bonds issued by the OECD or a G20 country, or any debt security issued or guaranteed by the central government or a regional or local government or the central bank of any EU Member State, or by the European Union, the European Central Bank or the European Investment Bank. The weighted average maturity (WAM) of the assets in the portfolio may not exceed 6 months and the weighted average life (WAL) of the assets may not exceed 12 months. In addition, the remaining time to maturity of each security is a maximum of 2 years and a maximum of 397 days until the nearest interest-rate determination date. The Fund may also keep its liquid assets in bank deposits. The fund may hold a limited amount of foreign currency assets in its portfolio, but only subject to the full hedging of currency risk.

VIG Moneymarket Fund is not a guaranteed investment. The risk of loss of the principal is to be borne by the investor. An investment in VIG Moneymarket Fund is different from an investment in deposits, with particular reference to the risk that the principal invested in VIG Moneymarket Fund is capable of fluctuation. VIG Moneymarket Fund does not rely on external support for guaranteeing the liquidity of the fund or stabilising the NAV per unit or share.

MARKET SUMMARY

The US-Iran memorandum reached in June was originally intended to open a 60-day negotiation period aimed at ending the fighting and reopening the Strait of Hormuz. There was still some optimism at the beginning of August, with efforts to maintain the ceasefire through mediation by neighboring countries. However, by mid-month it had become clear that no meaningful progress had been made, and shipping through the strait therefore remained restricted. By the end of August, oil prices had risen back to around USD 90 per barrel, once again posing upside risks to bond yields. In Hungary, the short end of the yield curve however performed well in August, supported by the continuation of the rate-cutting cycle and the relatively large government bond maturity in August. At the end of August, the central bank cut its policy rate by 25 basis points, in line with expectations, bringing it to 5.5%. At the press conference following the meeting, Governor Mihály Varga mentioned that the MNB had started reviewing its 3% inflation target in the spring, with the results of the review expected to be announced in the autumn. A potential adjustment of the target could be an important step towards the monetary convergence required for euro adoption. Inflation edged up slightly in August, with the annual rate of price growth increasing from 1.2% in July to 1.3%. According to the final data, second-quarter GDP growth remained at 1.7%. Agricultural output weakened, while industry once again became one of the drivers of growth.
