

VIG ACTIVE BETA FLEXIBLE ALLOCATION FUND

EUR-IP series EUR

MONTHLY report - 2026 SEPTEMBER (made on: 09/30/2026)

INVESTMENT POLICY OF THE FUND

The Fund's objective is to create an investment portfolio that is intended to achieve capital growth through active portfolio management, investing predominantly in US and European companies. Accordingly, the Fund Manager's investment portfolio is composed of developed-market equities, predominantly securities issued by US and European companies and short-term developed-market government bonds. The Fund pursues an active asset allocation policy. If the Fund Manager considers the prevailing capital market conditions to be unfavourable, it may significantly reduce equity exposure in order to protect capital. If capital market conditions appear ideal for taking equity exposure, the Fund Manager may invest the Fund's assets entirely in equities. On average over a full market cycle, the portfolio maintains an equity ratio of approximately 70%.

The Fund's investment universe includes the developed equity, bond and money markets. The Fund intends to hold liquidity related to trading needs in bank deposits or short-term developed-market government securities. As a general rule, of all the equities in the investment universe, the Fund intends to hold those that are considered the most popular among business partners, employees and investors.

The Fund Manager may significantly reduce equity exposure in the event of a break in a rising trend. In this situation, the Fund mainly holds foreign-currency money-market instruments in its portfolio. In the event of a rising market trend and increasing global risk appetite, the Fund will invest in developed-market equities as mentioned above.

The Fund invests at least 80% in assets that are issued and traded outside Hungary.

MARKET SUMMARY

The main event of the month was the Federal Reserve's interest rate increase: the US central bank raised its benchmark rate by 25 basis points, as expected. This is the first rate hike since July 2023, and market participants expect it to be followed by a further 3–4 rate hikes. Rising U.S. yields are being driven by a combination of factors, including the substantial U.S. budget deficit, inflationary pressures, and bond issuances linked to AI investments. Despite this, there has been no overall downturn in the U.S. stock market yet, but beneath the surface, the picture is no longer uniform. While AI-related equities are performing well, stocks of companies operating in more traditional sectors of the economy are underperforming. This is clearly illustrated by the underperformance of the Russell 2000 Index, which tracks the average price changes of small-cap stocks. Corporate earnings and earnings expectations remain strong, but it is unclear how vulnerable these outlooks would be if the development and adoption of AI were to slow down due to regulatory or other factors. Monetary policy is also tightening in Europe. Alongside improving growth prospects, rising inflation expectations driven primarily by high energy prices are a particular concern. The bond market is characterised by soaring yields. In Western Europe, high yield levels are being driven by domestic political instability, rising inflationary pressures and the ongoing Russia-Ukraine conflict. The automotive industry, a key driver of European manufacturing, is under pressure to undergo structural change due to competition from China.

In September, global capital markets fluctuated due to unresolved issues carried over from August. The decline at the beginning of the month was caused by renewed tensions between the United States and Iran, rising crude oil prices, and rising Treasury yields. However, the most significant event of the month was the Federal Reserve's 25-basis-point interest rate hike (raising the rate to 3.75–4.00%). Since investors had largely anticipated this move considering strong labor market data and excessively high inflation figures, stocks initially rebounded; however, bond yields remained elevated due to the hawkish message on inflation conveyed by Chairman Kevin Warsh and forecasts of further rate hikes. The yield on 10-year U.S. Treasury bonds rose above 5% on several occasions and later reached levels last seen in 2007 or 2002. This put pressure on stock valuations and risk appetite. Escalating tensions between the United States and Iran drove up crude oil prices and dampened investor sentiment—particularly in Europe, where events in the Strait of Hormuz are the focus of attention due to the region's economies' dependence on Middle Eastern energy sources. Rising bond yields have often been accompanied by increased stock market volatility in the past, so we further reduced the Fund's equity weighting, which stood at around 50% at the end of the month.
