

INVESTMENT POLICY OF THE FUND

The aim of the Fund is to invest on equity markets of the Central-European region. It is recommended to those who want to draw benefit from long-term performance of companies listed on the stock exchange of the region. When shaping the Fund's portfolio, primary criterion is to optimize the aggregate risk of securities included in the Fund. In order to reduce the risks, the Fund Management Company selects the securities to be involved in the portfolio in the most circumspect way. It conducts analyses on the risk factors of the securities and supports its decisions with profound calculations.

The Fund buys shares issued by companies of the countries of the Central-Eastern European region (primarily of, Czech Republic, Poland, Austria, Romania, Hungary, and secondarily of Slovenia, Croatia, Slovakia) but the Fund may also invest in shares of companies of other developing and developed countries as well as in other collective investment securities. Due to its investment strategy, the Fund may invest in assets denominated in multiple currencies. The Fund may hedge part or all of its currency risks using forward currency positions against the target currency, which is the benchmark settlement currency (EUR). The Fund Manager has discretionary authority to decide, based on market conditions, whether to reduce the currency risk of positions denominated in currencies other than the target currency through hedging transactions. In order to effectively build the Fund's portfolio, the application of equity and index transactions is also allowed. In order to ensure liquidity, the Fund wishes to keep government securities distributed by member states of the EU, OECD or G20

MARKET SUMMARY

In September 2026, the benchmark index, expressed in euros, fell by 0.84%, underperforming global equities, which rose by 1.27% during the same period. The Fund outperformed the benchmark index by 0.23% during the month. The positive performance in August—when the benchmark index posted a return of +1.95%—was followed by a reversal in September, driven by the combined effects of rising regional bond yields, geopolitical uncertainty, and adverse factors affecting certain sectors. MOL contributed the most to the benchmark index's rise, supported by the continued strength of its refining business and a constructive investor day. PKN Orlen was among the main negative contributors, as it was pressured by supply disruptions caused by the shutdown of the Saudi East-West pipeline in mid-September, which forced the company to procure emergency crude oil shipments at higher prices. Hidroelectrica and Romgaz also had a negative impact, as Romanian energy companies generally underperformed. The Fund maintained a 100% equity allocation throughout the month. The overweight position in MOL contributed positively to relative performance, while the overweight position in PKN Orlen had a negative impact, given the company's 6.0% decline. The overweight position in Petrom had a neutral overall impact, as while the company's capital markets day and recent updates on Neptun Deep production provided support, they were unable to offset the general weakness of the Romanian market. The underweights in CEZ, Hidroelectrica, and BRD all contributed positively to relative performance, as these companies fell significantly during the month.
