

INVESTMENT POLICY OF THE FUND

MARKET SUMMARY

September was defined by a powerful, broad-based government bond selloff – the worst month for global bonds since Q4 '24. The catalyst was a combination of forces: oil surging above \$100/bbl on Middle East supply disruptions, a strong August jobs report, and the Fed's unanimous 25bp hike on September 16, its first since 2023. The post-FOMC rally proved short-lived: the dot plot showed 16 of 19 members pencilling in a further hike in 2026, and resilient retail sales and business activity data reignited rate fears through month-end. The 10-year yield broke through 5% on September 18, ending the month at 5.29%, while the 30-year hit its highest level since 2002 at 5.63%. The 2-year rose from 4.34% to 4.89%, producing a bear flattening as the front end led the repricing of the Fed's terminal rate. Bunds, Gilts, and JGBs all sold off in sympathy. A cool August PCE print on September 30 offered a late reprieve, pulling October hike odds back to approximately 36%. All three major credit segments posted sharply negative total returns (a full reversal of August's recovery) with duration the overwhelming headwind: EM USD Bonds -2.68%, US Investment Grade -2.40%, and US High Yield -2.33%. High yield was the relative outperformer given its shorter duration, though HY OAS widened sharply from c.260bps to c.309bps, its worst monthly performance since 2022. IG spreads were more contained, widening only around 3bps to about 84bps OAS, but the combination of modest spread widening and the brutal rate selloff drove IG total returns deeply negative. The one bright spot was floating-rate credit: CLOs led sector performance, their minimal Treasury duration insulating them from the rate move. EM sovereign spreads held near historical tights despite the Treasury surge, supported by limited supply – EM external issuance of \$53 billion was down 32% year-over-year. After reducing exposure to the GCC and other markets most vulnerable to the conflict around Iran in March, we have been selectively rebuilding positions along with adding to the oil exposure via Aramco long-dated bonds.

GENERAL INFORMATION

Fund Manager:	VIG Investment Fund Management Hungary
Custodian:	Unicredit Bank Hungary Zrt.
Main distributor:	VIG Investment Fund Management Hungary
Benchmark composition:	Fund has no benchmark
ISIN code:	HU0000718408
Start:	12/30/2016
Currency:	HUF
Net Asset Value of the whole Fund:	23,389,028 EUR
Net Asset Value of I series:	7,632,714,433 HUF
Net Asset Value per unit:	1.096557 HUF
