

INVESTMENT POLICY OF THE FUND

The purpose of the investment fund is to create an equity fund that seeks to benefit from innovation in various industries. The Fund aims to achieve long-term capital growth by investing in global companies that are at the forefront of the use of disruptive technologies and can thus play a leading role in their industries. Disruptive technology refers to innovations or developments that significantly change or disrupt existing industries, business models, products or services. Such trends include, for example, big data (artificial intelligence, cyber security, quantum computers), e-mobility (electric cars and related battery technologies), digitisation and related entertainment (metaverse, e-sports) and, last but not least, fintech and robotics industry breakthroughs.

The Fund aims to achieve its objectives through equity-type instruments, primarily exchange-traded funds (ETFs), equities and open-ended public investment funds. The Fund takes a forward-looking approach and actively seeks companies in industries that show potential for growth through technological innovation. Investments are made in companies that have strong fundamentals and are capable of long-term value creation and achieving competitive advantage through innovation. The investment philosophy is based on the belief that innovation is a key driver of long-term business success and shareholder value. Trends related to technological innovation are long-term processes that extend beyond normal economic cycles and are generally global and affect the entire world. Consequently, the Fund is not subject to any geographical restrictions. Since the Fund aims to profit from long-term growth and has significant exposure to the equity market, we recommend the Fund to investors who want to invest in the longer term and have a relatively high willingness to take risk.

MARKET SUMMARY

September was a particularly strong month for the Fund. Semiconductor and large-cap technology stocks—which form the core of the investment universe—rose to new highs despite weakness in the broader market. The chip sector rose more than 11%, marking its second-best September since 2001 in a month that is typically seasonally weak. However, the month was not a straight line; on September 14, the sector fell worldwide following statements by the heads of leading AI labs urging a slowdown in development, but a week later, sentiment completely reversed. The turnaround was driven by Meta's personal AI agent, Muse. Ten days after its September 8 launch, the app topped the App Store charts, reaching 2.5 million downloads in the U.S. in just over two weeks, and the stock jumped 11% on September 21. According to market analysts, the widespread adoption of these agents by consumers could boost demand not only for GPUs but also for server CPUs. On the same day, AMD's stock rose 10%, pushing its market capitalization past the \$1 trillion mark. Looking ahead, two factors deserve attention. According to press reports, Anthropic's IPO has been pushed back from October to November, after the midterm elections. On the financing front, the first signs of friction have emerged: with 10-year yields above 5%, lower-rated data center developers can now only access funding at a significant premium, which could slow the pace of construction. We made several active portfolio adjustments during the month. We increased our exposure to semiconductors, primarily in equipment manufacturers, TSMC, and memory chip manufacturers. We financed these purchases by reducing our holdings in cybersecurity and cyclical consumer stocks to a greater extent, and to a lesser extent in certain large-cap platform stocks. This reallocation reflects our market view that, for now, the infrastructure layer may remain the primary beneficiary of the AI trade, particularly in the non-commodity segments of the market. We continue to maintain an overweight position in the Magnificent 7, but selectively, primarily in hyperscalers, which are currently the most successful monetization points for AI infrastructure. Within the software sector, we view cybersecurity and infrastructure software as more attractive than horizontal software; however, valuations and the fact that the market is extremely overbought in the short term may be a holding factor for now.

GENERAL INFORMATION

Fund Manager:	VIG Investment Fund Management Hungary
Custodian:	Erste Bank Hungary Zrt.
