

INVESTMENT POLICY OF THE FUND

The fund aims to profit from global megatrends that extend beyond economic cycles. Such trends may include demographic changes (ageing society, developing markets), efficiency gains due to scarce resources (renewable resources, energy efficiency), urbanisation, or even technological innovation. The fund aims to achieve its objectives through equity-type instruments, primarily exchange-traded funds (ETFs), equities and open-ended public investment funds. Megatrends are long-term changes that have a lasting impact on our social and economic environment. The fund aims to share in the profit growth of companies that could be winners in these processes. Megatrends are long-term processes that extend beyond normal economic cycles, are usually global and affect the whole world. Consequently, the fund does not have a geographical specification. As the fund aims to profit from long-term growth and has significant exposure to stock markets, it is recommended for risk-taking investors with a long-term investment horizon. The Fund holds its assets in euro. The Fund invests only in investments where the expense ratio remains below 2.5%, but always aims to keep the average fees charged on the underlying collective investment instruments below 1%. The fund also does not have a geographical specification, and thus no typical currency composition. The target currency of the Fund is therefore the settlement currency of the benchmark index (USD). Due to the strategy of the Fund, it may also invest in assets denominated in foreign currency. The Fund may hedge some or all of its foreign currency risk using forward currency positions against the target currency, i.e. the settlement currency of the benchmark (USD). The Fund Manager has a discretionary right to reduce the foreign currency risk of positions denominated in a currency other than the target currency, depending on market developments, by entering into hedge transactions. In addition, the use of equity and index futures is permitted in order to effectively build the Fund's portfolio.

MARKET SUMMARY

The Fund posted a modest positive return in September, a month in which the technology sector was virtually the only factor keeping the major indices afloat. Exposure to technology contributed significantly to performance, while interest-rate-sensitive and consumer-related sectors were characterized by weakness. Global stock indices remained stable on the surface, but a broad-based correction was taking place beneath the surface. The defining event of the month was the interest rate hike. On September 16, the Fed unanimously decided to raise the target interest rate range by 25 basis points to 3.75– 4.00%, and policymakers are projecting, on average, one more hike this year. Fed Chairman Kevin Warsh characterized the move as a withdrawal of monetary easing, not as tightening. The bond market continued the rise in yields that had characterized recent months: the U.S. 10-year yield rose to 5.3%, while the 30-year yield closed above 5.6%. Oil prices also fueled this movement; following renewed U.S.-Iranian skirmishes in the Strait of Hormuz, Brent crude rose by about 14% and stood above \$100 at the end of the month. The combination of more expensive money and more expensive energy resulted in a tight market. The S&P 500 fell 0.4%, while the Nasdaq Composite rose 1.9% and the Nasdaq 100 rose 3.3%; meanwhile, the Dow Jones lost about 4% and the small-cap Russell 2000 lost 5.3%. Three-quarters of the S&P 500's constituents ended the month in the red. Large-cap growth stocks significantly outperformed value stocks and the small-cap segment.

Meta's personal AI agent, Muse, launched on September 8, rose to the top of the U.S. App Store within ten days, and the stock rose by about 25% during the month. The market saw mass consumer demand for such agents for the first time, which could expand the demand for computing capacity to a new segment. On the second weekend of September, Anthropic's CEO called for a slowdown in development, a call echoed by Sam Altman and Elon Musk. The following Monday, the chip sector led a global sell-off, but fears of a slowdown quickly subsided. The U.S. midterm elections are now on the horizon and could be key drivers of market movements in the coming month. In the first half of the month, we partially took profits on our Korean index positions, citing the index's vulnerability in the event of a potential slowdown in the AI trend. No other significant changes occurred in the Fund's asset allocation during the month.
