

INVESTMENT POLICY OF THE FUND

MARKET SUMMARY

The main event of the month was the Federal Reserve's interest rate increase: the US central bank raised its benchmark rate by 25 basis points, as expected. This is the first rate hike since July 2023, and market participants expect it to be followed by a further 3–4 rate hikes. Rising U.S. yields are being driven by a combination of factors, including the substantial U.S. budget deficit, inflationary pressures, and bond issuances linked to AI investments. Despite this, there has been no overall downturn in the U.S. stock market yet, but beneath the surface, the picture is no longer uniform. While AI-related equities are performing well, stocks of companies operating in more traditional sectors of the economy are underperforming. This is clearly illustrated by the underperformance of the Russell 2000 Index, which tracks the average price changes of small-cap stocks. Corporate earnings and earnings expectations remain strong, but it is unclear how vulnerable these outlooks would be if the development and adoption of AI were to slow down due to regulatory or other factors. Monetary policy is also tightening in Europe. Alongside improving growth prospects, rising inflation expectations driven primarily by high energy prices are a particular concern. The bond market is characterised by soaring yields. In Western Europe, high yield levels are being driven by domestic political instability, rising inflationary pressures and the ongoing Russia-Ukraine conflict. The automotive industry, a key driver of European manufacturing, is under pressure to undergo structural change due to competition from China.

The Fund's net asset value declined slightly in September. Global capital markets fluctuated in September due to unresolved issues carried over from August. The weakness at the beginning of the month was caused by renewed tensions between the United States and Iran, rising crude oil prices, and higher Treasury yields. However, the most significant event of the month was the Federal Reserve's 25-basis-point interest rate hike (raising the rate to 3.75–4.00%). Since investors had largely anticipated this move in light of strong labor market data and excessively high inflation figures, stocks initially rebounded; however, bond yields remained elevated due to the hawkish message on inflation conveyed by Chairman Kevin Warsh and forecasts of further interest rate hikes. The yield on 10-year U.S. Treasury bonds rose above 5% on several occasions and later reached levels last seen in 2007 or 2002. This put pressure on stock valuations and risk appetite.
