VIG ACTIVE BETA FLEXIBLE ALLOCATION FUND

HUFh-RP series HUF MONTHLY report - 2026 OCTOBER (made on: 10/31/2026)

INVESTMENT POLICY OF THE FUND

The Fund's objective is to create an investment portfolio that is intended to achieve capital growth through active portfolio management, investing predominantly in US and European companies. Accordingly, the Fund Manager's investment portfolio is composed of developed-market equities, predominantly securities issued by US and European companies and short-term developed-market government bonds. The Fund pursues an active asset allocation policy. If the Fund Manager considers the prevailing capital market conditions to be unfavourable, it may significantly reduce equity exposure in order to protect capital. If capital market conditions appear ideal for taking equity exposure, the Fund Manager may invest the Fund's assets entirely in equities. On average over a full market cycle, the portfolio maintains an equity ratio of approximately 70%.

The Fund's investment universe includes the developed equity, bond and money markets. The Fund intends to hold liquidity related to trading needs in bank deposits or short-term developed-market government securities. As a general rule, of all the equities in the investment universe, the Fund intends to hold those that are considered the most popular among business partners, employees and investors.

The Fund Manager may significantly reduce equity exposure in the event of a break in a rising trend. In this situation, the Fund mainly holds foreign-currency money-market instruments in its portfolio. In the event of a rising market trend and increasing global risk appetite, the Fund will invest in developed-market equities as mentioned above.

The Fund invests at least 80% in assets that are issued and traded outside Hungary.

MARKET SUMMARY

In October, three mutually reinforcing forces shaped the money and capital markets: doubts about the finance ability of the investment cycle linked to artificial intelligence, persistently high real yields, and oil prices above $110 due to the escalation in the Middle East. At its October meeting, the Federal Reserve kept its benchmark interest rates unchanged, even though an interest rate hike had been priced in just a month earlier. The 10-year yield fell from a peak of 5.3% to below 5%. This was not driven by disinflation, but rather by expectations of a slowdown in AI-related bond issuance. Although the S&P 500 hit a new high early in the month, this was followed by the longest losing streak for semiconductor stocks since 2008. The main risk remains the November 3 midterm elections and the subsequent likelihood of a U.S. military strike against Iran. In Europe, inflation has remained above 3%, shifting the balance within the European Central Bank toward further tightening. The French yield spread widened to more than 170 basis points, and the 10-year yield temporarily exceeded 5%. The auto and luxury sectors were dragged down by weak Chinese demand, while AI-related electric vehicle stocks were weighed down by global market sentiment.

October 2026 was characterized by sector rotation as well as a correction in the technology sector, while broader indices remained relatively stable (for example, the MSCI World and other developed-market indices representing global markets closed with only a moderate decline of around 0.5– 0.8%). Beneath the surface, however, significant shifts were taking place: concerns among investors about the return on investment in artificial intelligence (AI) intensified, putting major tech giants under significant pressure and leading to a more than 5% plunge in the Nasdaq Composite index. At the same time, there was a dramatic shift of capital from growth stocks toward value-oriented and more defensive sectors, so companies in the energy, utilities, and consumer staples sectors performed particularly well during the month. Volatility in popular stocks had already risen in September, so we began October with an equity allocation of around 50%. By the end of October, the trend filters we monitor also signaled a sell, so we reduced our equity weighting to 25%.
