VIG MEGATREND EQUITY FUND

PLN-IP series PLN MONTHLY report - 2026 OCTOBER (made on: 10/31/2026)

INVESTMENT POLICY OF THE FUND

The fund aims to profit from global megatrends that extend beyond economic cycles. Such trends may include demographic changes (ageing society, developing markets), efficiency gains due to scarce resources (renewable resources, energy efficiency), urbanisation, or even technological innovation. The fund aims to achieve its objectives through equity-type instruments, primarily exchange-traded funds (ETFs), equities and open-ended public investment funds. Megatrends are long-term changes that have a lasting impact on our social and economic environment. The fund aims to share in the profit growth of companies that could be winners in these processes. Megatrends are long-term processes that extend beyond normal economic cycles, are usually global and affect the whole world. Consequently, the fund does not have a geographical specification. As the fund aims to profit from long-term growth and has significant exposure to stock markets, it is recommended for risk-taking investors with a long-term investment horizon. The Fund holds its assets in euro. The Fund invests only in investments where the expense ratio remains below 2.5%,but always aims to keep the average fees charged on the underlying collective investment instruments below 1%. The fund also does not have a geographical specification, and thus no typical currency composition. The target currency of the Fund is therefore the settlement currency of the benchmark index (USD). Due to the strategy of the Fund, it may also invest in assets denominated in foreign currency. The Fund may hedge some or all of its foreign currency risk using forward currency positions against the target currency, i.e. the settlement currency of the benchmark (USD). The Fund Manager has a discretionary right to reduce the foreign currency risk of positions denominated in a currency other than the target currency, depending on market developments, by entering into hedge transactions. In addition, the use of equity and index futures is permitted in order to effectively build the Fund's portfolio.

MARKET SUMMARY

October was a difficult month for the Fund’s focus areas. Over the course of the month, the technology sector—which had been virtually the sole force keeping the market afloat in previous months—became the focal point of the correction, while the energy and defensive sectors took the lead. Bond yields continued to rise at the beginning of the month: the U.S. 10-year yield jumped to 5.34% on October 1—a level not seen since 2002—before retreating to near 5% by the end of the month. On October 28, the Fed left its 3.75– 4.00% interest rate range unchanged, though two policymakers voted in favor of an immediate hike, and the market considers the next move in December to be all but certain. Market conditions reversed compared to September. The S&P 500 fell 0.9%, while the Nasdaq Composite lost 5.3%, marking the index’s weakest month since March 2025. Among the various market factors, momentum and growth stocks saw the sharpest declines. The main issue of the month became the financing of AI investments. During earnings season, several hyperscalers saw their free cash flow turn negative: Alphabet suffered its largest single-day drop since its 2004 IPO, while Meta is creating a class of non-voting shares to facilitate capital raising. The market is no longer focused on demand but rather on how long expansion can be financed in a yield environment of around 5%. The chip sector fell for eight consecutive days, marking the longest such streak since 2008. Following the close of the month, Democrats secured majorities in both houses of Congress in the midterm elections. The market’s initial reaction was positive, but a day later, a strong wave of selling swept through the technology sector as investors feared stricter regulations on data center construction. This could be one of the main risks in the coming months. During the month, we narrowed our thematic diversification: we reduced or sold our positions in healthcare, finance, water management, and wind energy, and scaled back our exposure to software. We reallocated the freed-up funds, as well as capital withdrawn from the broad AI ETF, into the semiconductor sector through direct equity positions (Nvidia, Broadcom, AMD) and a lithography-focused ETF. We partially rebuilt our position in the Korean index.

GENERAL INFORMATION

Fund Manager:	VIG Investment Fund Management Hungary
Custodian:	Unicredit Bank Hungary Zrt.
Main distributor:	VIG Investment Fund Management Hungary
Benchmark composition:	100% MSCI AC World Daily Total Return Net USD Index
