VIG POLAND LARGE CAP EQUITY FUND

HUF-RP series HUF MONTHLY report - 2026 OCTOBER (made on: 10/31/2026)

INVESTMENT POLICY OF THE FUND

MARKET SUMMARY

In October, three mutually reinforcing forces shaped the money and capital markets: doubts about the finance ability of the investment cycle linked to artificial intelligence, persistently high real yields, and oil prices above $110 due to the escalation in the Middle East. At its October meeting, the Federal Reserve kept its benchmark interest rates unchanged, even though an interest rate hike had been priced in just a month earlier. The 10-year yield fell from a peak of 5.3% to below 5%. This was not driven by disinflation, but rather by expectations of a slowdown in AI-related bond issuance. Although the S&P 500 hit a new high early in the month, this was followed by the longest losing streak for semiconductor stocks since 2008. The main risk remains the November 3 midterm elections and the subsequent likelihood of a U.S. military strike against Iran. In Europe, inflation has remained above 3%, shifting the balance within the European Central Bank toward further tightening. The French yield spread widened to more than 170 basis points, and the 10-year yield temporarily exceeded 5%. The auto and luxury sectors were dragged down by weak Chinese demand, while AI-related electric vehicle stocks were weighed down by global market sentiment.
International stock markets were characterized by volatile investor sentiment in October. Market attention focused on U.S. inflation trends, the outlook for companies involved in artificial intelligence, as well as geopolitical tensions in the Middle East and oil price trends. Regional stock markets underperformed international markets to some extent, partly due to the strengthening dollar. The Polish stock market performed roughly in line with the Central European regional index, closing the month with a decline of nearly 1% in forint terms. The zloty weakened to a multi-year low, while disputes surrounding the central bank's leadership caused institutional uncertainty. In terms of stock performance, consumer and e-commerce companies led the pack, with Allegro standing out among them as it significantly outperformed the market. In contrast, KGHM's share price fell significantly, a trend partly explained by unfavorable developments in global commodity markets. The banking sector's performance was mixed: while mBank posted a significant gain following an excellent interim report, the share prices of PKO and Pekao Bank declined in line with the performance of the regional banking sector. The Fund maintained a 102% equity exposure throughout the month. The overweight position in Benefit Systems contributed positively to relative performance, while the underweight position in the utilities sector had a negative impact on the Fund's performance relative to its benchmark.

GENERAL INFORMATION

Fund Manager:	VIG Investment Fund Management Hungary
Custodian:	Unicredit Bank Hungary Zrt.
Main distributor:	VIG Investment Fund Management Hungary
Benchmark composition:	100% MSCI Poland IMI Loc Net
ISIN code:	HU0000710843
