Current account	2.78%
Other assets	0.10%
Total investment assets	100.00%
Derivative products	0.00%
Net corrected leverage	78.26%

Investment Policy of the Fund:

The Fund's objective is to establish an investment portfolio with a "total return" perspective – to achieve positive return for the investor under any circumstances. The Fund attempts to reach this goal by selecting – subsequent to the application of different ways of analysis – those asset classes that bear the highest potential for appreciation. Investments are performed through the purchase of investment Fund's units and collective investment securities. According to the professional consensus, 40 percent of the return of a given portfolio is determined by the selection of the asset classes. With regard to this, one of the most important steps in carrying out investment activity is the selection of the appropriate asset class, which requires increased awareness, market experience and deeper analysis, forecasting capability, and last but not least an immense amount of time. These capabilities and resources can be found, naturally, among professional investors, and consequently it is them who make and carry out those decisions that result in the highest profit with the most advantageous risk/reward ratio. To achieve a continuously positive return the Fund actively uses risk management procedures, primarily so-called "stop-loss" procedures. Further, the sizes of positions that bear higher risk are selected with the utmost care. With the help of AEGON

derivative Funds the AEGON Smart Money Investment Fund of Funds will have the opportunity of "short-selling" and thereby the ability to realize positive returns not only in rising markets, but in falling ones as well. The Fund primarily invests its capital into the investment funds, managed by AEGON Hungary Fund Management Co., but it is also allowed to invest into other investment funds, or purchase collective securities for its portfolio with the objective of diversification, or if the given asset class should not be covered by the Funds of the Fund Management Co. Indirectly, the Fund is able to reach the total investment universe known today, through the units of the investment funds (bond market, money market, stock market, real estate market, private equity, derivatives and other regulated and OTC derivative products, commodity market products, currency, etc.) and realize investments on the domestic and international level as well. To assure liquidity, the Fund can hold government bonds and treasury bills issued in the name of the Hungarian State by the Hungarian Government Debt Management Agency and distributed within the framework of the PDS – the Primary System for Distribution of Government Securities – as well as bonds issued by the National Bank of Hungary (Central Bank) and other money market instruments in its portfolio.

The Fund thus takes some heavy weight off the investor's shoulders, namely: the asset allocation between asset classes, and switching to the appropriate Fund. The Fund

Market Summary:

After a very strong March, April was characterized by stagnation in the markets, the volatility, however increased significantly in the middle of the month, which could signal a trend reversal forward. Emerging equities rose 1% in April, outperforming the developing equities, which fell 0.2%. Asian equities rose 1.2%. Europe's debt crisis dragged equity markets lower at the end of the month. US equities increased by 1.1%, while Japanese stocks were flat. Emerging Asian equities were the best performing emerging market in April after underperforming last month, the region rose 1.2% on stronger economic data. The former Russian over-

weight has been changed to a global and diversified exposure, which is likely to include the best performing regions. Thus, the Fund has Central European Equity weight (AEGON Central European Equity Fund), which is hosting one of the best-performing regions in the first place, and to the international (AEGON International Equity Fund) equity markets, because U.S. equities can also outperform. We have also added Asian equities with their outstanding growth prospects and improving valuation - but here the monetary tightening might cause temporal pull backs on capital markets. We eased the stock market risks and uncertainty by dominant Hungarian bond exposure (AEGON Domestic Bond Fund), but the portfolio also include regional bonds (AEGON Euroexpress Fund), which hopefully will also improve the Fund's Sharpe ratio.
