Net Asset Value (HUF): 1 624 430 991

Net Asset Value per share: 0,887784

Investment Policy of the Fund:

The goal of the fund is to buy investment assets that are very undervalued according to various economical/market factors. The fund concentrates on so called distressed assets that became rather cheap because of some explosion of psychological panic in the markets. The Fund is allowed to take long positions and open uncovered short positions on such assets that became extraordinary expensive in market euphoria. The position taking in very over/undervalued assets is usually unprofitable in short-term, but on the other hand it could get very rewarding in long-term. The fund doesn't use stop-loss orders, since it hasn't got a commercial approach, so the volatility of the NAVPU can get pretty high. To lower the volatility, the portfolio manager pays big attention to the size, mix and correlation of the positions. The investment policy of the fund isn't trend following, but it is contrarian. A contrarian believes that certain crowd behavior among investors can lead to exploitable mispricings in securities markets. For example, widespread pessimism about a stock can drive a price so low that it overstates the company's risks, and understates its prospects for returning to profitability. Identifying and purchasing such distressed stocks, and selling them after the company recovers, can lead to above-average gains. Similarly, widespread optimism can result in unjustifiably high valuations that will eventually lead to drops, when those high expectations don't pan out. Avoiding investments in over-hyped investments reduces the risk of such drops. These general principles can apply whether the investment in question is an individual stock, an industry sector, or an entire market or asset class. The Fund mainly invests into equities, bonds, money market indexes, commodities, currencies, but the investment possibilities of the fund are extremely wide, and it can invest into any kind of capital market instrument. The fund is allowed to use leverage by investing into derivatives and futures. Leverage has the potential to enlarge profits or losses by the same magnitude. The greater the amount of leverage on capital you apply, the higher the risk that you will assume. The fund's benchmark index is the RMAX index. The main goal of the portfolio manager is to over perform the benchmark yearly by 5%–10%.

The asset allocation of the Fund, 15.05.2009
