INVESTMENT POLICY OF THE FUND

The Fund invests in equities issued by corporations of the Central European region (primarily Hungary, Poland, The Czech Republic, Romania, Slovenia, Croatia, secondly Austria, Russia, Turkey), but the Fund can also invest in emerging or developed regions' equities and other collective securities as well. The primary aspect in forming the Fund's portfolio is to optimize aggregate exposure of the securities. To minimize risk the fund manager selects the securities to be included in the portfolio with utmost care. Analyses concerning the securities' risk criteria are carried out and decisions are underpinned by thorough calculations. During the selection the liquidity of a given security plays an important role. The fund manager applies widespread diversification to handle the risk each security implies (in the given equity markets risk is further diversified by expanding mid-cap exposure) and periodically uses derivatives for hedging to further minimize risk. To ensure the accurate level of liquidity the Fund intends to hold Hungarian Government securities issued by the Hungarian Public Debt Management Agency and distributed within the framework of the primary government security distribution system. However, according to legal regulation the proportion of equities within the portfolio may be as high as 100%. The Fund's benchmark consist of 95% CECEXEUR Index + 5% ZMAX Index.

MARKET SUMMARY

Global equity markets bounced back in April on the back of the strong Q1 earnings season. 2/3 of the reporting companies beat on EPS, highest surprise came from the global cyclicals (thanks to strong commodity prices). On the other hand global leading indicators shows some deterioration in developed markets (US ISM manufacturing index declined to a four-month low of 60.4 in April), which may indicate some slow down of the earnings growth trend. Despite the strong commodity prices, emerging markets underperformed developed markets in April on renewed inflation and interest rate concerns.

Poland was the best performer in April in the CE3 region, rising by 5.2%, while Hungary's BUX index rose by 4.8% and the PX index gained 2.5% in HUF terms. Oil sector continued its strong performance in April on the back of the strong sentiment for commodity stocks, Lotos - also fuelled by takeover news flow - gained by 10%, while MOL lagged the polish peers (+4.5%). Banking stocks also had a positive month, OTP ranked as the best-performing stock, triggered by falling bond yields. The Q1 earnings season has just started in region, which may cause more volatile movements within the sectors.
