Total investment assets	100.00%
Net corrected leverage	105.71%
Derivative products	30.83%

MARKET SUMMARY

The fund lost 1.15% during the month, which is better with 2.20% than its benchmark. The 2 years-old world economy expansion reached its matured phase till mid-2011. This means that we have robust growth data, accelerating inflation pressure and the chance of the monetary and fiscal tightening. The policy change starts in the developing countries, they are focusing on quantitative tightening and developed countries will be next economies where rate hiking cycle may starts in the last part of the year. The main issues will be the timing and size of the tightening cycle which will dominate the major trend until end of the year. The first 25bp hiking was executed by the ECB, which shows the first sign of the regime change. The fund holds the same durations risk of the benchmark portfolio and excludes countries with loosing fiscal policy.
