INVESTMENT POLICY OF THE FUND

The AEGON Atticus Vision Derivative Fund is the so-called premium product of the AEGON Hungary Fund Management Company. It represents more risk than its "smaller brother" the AEGON Atticus Alfa Derivative Fund, but it also targets a much higher yield. The Fund is strongly concentrated, pays less attention to diversification and follows an opportunistic investment strategy. The investment possibilities of the fund are extremely wide. The Fund's assets will be invested according to the anticipation of the portfolio manager. The Fund mainly buys or sells equities and equity indices, opens forward currency positions, buys options and writes option contracts in order to earn the option premium. The fund is allowed to use double leverage by investing in derivatives and futures which means that the value of the positions of the Fund can be the double of its capital resources. Should the price of the fund's assets change by 1%, the balance of the fund could may change by as much as 2%. Leverage has the potential to enlarge profits or losses by the same magnitude. The greater the amount of leverage on capital you apply, the higher the risk that you will assume. The Fund is allowed to take long positions and uncovered short positions as well. According to this, the Fund can bet on a bullish or on a bearish market situation, too. The fund's main goal is to over-perform its benchmark which is the RMAX Index + 3,00% The investors also have the opportunity to profit from the anticipations of the fund manager if those turn out to be right. The fund manager typically keeps the assets of the fund in government securities, and he only invests into riskier assets if he discovers some attractive investment possibility.

Total investment assets	100.00%
Net corrected leverage	148.05%
Derivative products	70.64%

MARKET SUMMARY

The fund gained 1.64% during the month, which is better with 0.95% than its benchmark. The 2 years-old world economy expansion reached its matured phase till mid-2011. This means that we have robust growth data, accelerating inflation pressure and the chance of the monetary and fiscal tightening. The policy change starts in the developing countries, they are focusing on quantitative tightening and developed countries will be next economies where rate hiking cycle may starts in the last part of the year. The main issues will be the timing and size of the tightening cycle which will dominate the major trend until end of the year. The first 25bp hiking was executed by the ECB, which shows the first sign of the regime change. The fund holds 20% international equity and 36% wheat and corn long position in line with this view. We hold our 12% yen short against US dollar because yen is overvalued in our fundamental model.

NET YIELD PERFORMANCE OF THE FUND:
