Start:	07/09/2007
Currency:	EUR
Total Net Asset Value of the whole Fund:	2,338,296 EUR
Net Asset Value of EUR series:	1,680,902 EUR
Net Asset Value per unit:	0.006829 EUR

## INVESTMENT POLICY OF THE FUND:

The aim of the fund is to profit from the return on climate change-related equity market investments, through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund manager's intentions are that the fund's portfolio should consist predominantly of the publicly traded shares of foreign-domiciled companies. The primary investment targets are the securities of companies that earn most of their revenues from exploiting the business opportunities arising from global climate change (environmental management, energy efficiency, clean technologies etc.), harnessing alternative resources (renewable energy, water management, agricultural chemistry etc.) and from agricultural activity (biotechnology, animal husbandry, fish farming, agricultural technology, etc.). When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, the fund primarily buys publicly issued foreign securities that are listed on foreign stock exchanges, and secondarily, it may also invest in shares issued by Hungarian companies. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. The proportions, within the equity investments, of subsectors related to climate change, alternative energy sources and agricultural activity are determined so as to ensure that the fund - in line with our expectations with regard to future risks and yields - fulfils its objective, which is to outperform the thematic global sector index selected as the benchmark over the longer term. The fund records its assets in euro; the fund management company may, at its own discretion, choose to hedge all or a part of its currency risks with forward currency positions, in compliance with the applicable statutory requirements.

  4 years
  5 years

Risk and Reward Profile:

very low
  low
  moderate
  intermediate
  significant
  high
  very high

## MARKET SUMMARY:

Equity markets managed to recover following a substantial correction in June. Investors kept focusing on QE downsizing issues, tapering jitters, however, gradually faded as the relative lack of newsflow supported market sentiment. Climate change related sectors showed mixed performance throughout July. Renewable energy was once again a leader as wind companies as well as solar equities staged a massive rally extending this year's enormous performance. Water and waste related companies also gained momentum in July, while potash manufacturers (Potash, Mosaic and Uralkali) collapsed as industry heavyweight Uralkali abandoned its joint trading firm with Belaruskali indicating not only a change in strategy, but also once step towards competitive pricing from oligopol market terms.

## ASSET ALLOCATION OF THE FUND ON 07/31/2013

Asset type	Weight
International equities	94.06 %
T-bills	1.42 %
Current account	4.40 %
