Net Asset Value of institutional series:	53,703,490 PLN
Net Asset Value per unit:	1.176244 PLN

INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields of the Polish equity market, and to profit from Poland's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund manager's intentions are that the fund's portfolio should consist predominantly of the publicly traded shares of foreign-domiciled companies. The fund's primary investment targets are the exchange-traded securities of companies that are active in Poland or that generate the bulk of their revenues there, or whose shares are listed on the Warsaw Stock Exchange. The fund may also invest in the shares of other Central and Eastern European corporations. These are listed as Austria, the Czech Republic, Hungary, Russia, Romania and Turkey; although the portfolio will always chiefly consist of the shares of companies listed on the Warsaw Stock Exchange. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, only publicly issued securities listed or in the process of being listed on the stock exchange will be purchased as equity investments. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. The weights of the shares within the portfolio are determined so as to ensure that the fund - in line with our expectations with regard to future risks and yields - achieves its objective, which is to outperform the benchmark advertised by the fund, over the longer term. The fund holds more than 30% of its assets in a currency other than the domestic currency (HUF). In accordance with the current legislation, the proportion of shares in the portfolio may be up to 100%.

MARKET SUMMARY:

Equity markets retreated from all-time high territory in August, driven by the ongoing uncertainties of the QE downsizing schedule and additionally, a major Syrian crisis unfolding. The Q2 U.S. earnings season brought no major surprises, once again clearly surpassing profit estimates on the bottom line level, while only a touch above consensus on the topline level.

CEE markets closed the in positive territory in August, despite of the continuing weakness of emerging markets. Within the region, PX index led the gain with a performance of +3.7%, WIG20 index rose 2.2%, while the Hungarian index fell 2.3% in EUR terms. On the macro side, the recently published leading indicators confirmed the expectations that Polish economy have been bottoming out in the second quarter which was one of the key market driver in recent months. PMI Manufacturing index jumped to 52.6 after 51.1 last month; moreover retail sales and industrial output significantly exceed July numbers. On the bottom side, Q2 earnings season also better than the previous quarter and the consensus expectations. Energy and Chemicals sectors outperformed the market, led by Lotos and Grupa Azoty on the back of the good results. We are constructive on the performance of Polish economy, nevertheless we remain cautious before the final announcement of the pension fund overhaul.
