Net Asset Value of PLN series:	17,504,938 PLN
Net Asset Value per unit:	0.979540 PLN

INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields of the Russian equity market, and to profit from Russia's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund's portfolio primarily consists of the publicly issued shares of foreign companies. The main investment targets are the stock exchange-traded shares of companies that maintain an active presence in Russia or the former CIS states, or which generate the bulk of their revenues in these countries. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. The weights, within the portfolio, of shares traded in the Russian market are determined with a view to ensuring that the fund - in line with our expectations with regard to future risks and yields - achieves its objective, which is to outperform the benchmark advertised by the fund, over the longer term. The fund records its assets in forint; the fund management company may, at its own discretion, choose to hedge all or a part of its currency risks with forward currency positions, in compliance with the applicable statutory requirements. Under the current legislation the proportion of shares in the portfolio may be up to 100%.

MARKET SUMMARY:

Equity markets retreated from all-time high territory in August, driven by the ongoing uncertainties of the QE downsizing schedule and additionally, a major Syrian crisis unfolding. The Q2 U.S. earnings season brought no major surprises, once again clearly surpassing profit estimates on the bottom line level, while only a touch above consensus on the topline level. The unfolding Syrian crisis sparked a buying spree in crude oil, adding to concerns coming from unrests in Egypt and temporary production issues in Libya.

Russian equities showed mixed performances in August. While the better than expected Chinese data and rising crude oil helped the Russian market, equities suffered from the consecutive outflow from the emerging markets. Steel sector reached the best performance on good quarterly results and improving steel markets, while banking sector was the clear laggard. Take into consideration the current valuation of the market and the capitulation of EM equities, we think Russian market is attractive compare to other equity markets.

ASSET ALLOCATION OF THE FUND ON 08/31/2013
