Net Asset Value of HUF series:	1,708,206,062 HUF
Net Asset Value per unit:	1.569025 HUF

INVESTMENT POLICY OF THE FUND:

The fund aims to create an explicitly defensive investment portfolio for its investors, and typically invests in developed-market government bonds, and related exchange-traded derivative transactions, in the interest of achieving the highest possible return with the assumption of currency risk. The fund primarily aims for a portfolio consisting of the publicly issued bonds of foreign governments and foreign-domiciled companies. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, when purchasing international securities the fund only selects publicly issued securities that are listed on foreign stock exchanges. The proportion of non-investment-grade securities is maintained at a low level, and if the planned ratio is overstepped due to the downgrading of a given issuer the fund restores it under the conditions stipulated by the relevant legal provisions. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term. In the course of its operation, however, the fund is managed on the premise that when compiling the portfolio, it is bonds that determine the nature of the fund. Accordingly, the proportion of bonds that may be kept in the fund at any given moment may reach the prevailing statutory maximum. When compiling the bond portfolio, taking into account the macroeconomic environment of the investment markets, the aim is to build up a long-term investment portfolio primarily on the basis of fundamental analyses. To ensure liquidity, the fund may purchase Hungarian government securities (primarily discount treasury bills) and MNB bonds; however, in accordance with the current statutory regulations the proportion of foreign bonds in the portfolio may be up to 100%. The fund management company is permitted, at its own discretion, to hedge all or a part of its currency risks with forward currency positions, in compliance with the statutory conditions.

 very high

MARKET SUMMARY:

The main topic for the investors in October was the US budget and debt ceiling problem and how the politicians could solve them. The US politicians disappointed as they did not manage to come to an understanding about next year's budget in time and the world number one economy has been shut down after 18 years. Analysts were concerned that the political gridlock would extend into mid-October, when Congress and the President must agree to raise the debt ceiling to avoid the prospect of defaulting on the public debt. However, after 16 days politicians managed to "kick down the can" and accept an interim appropriations bill that postpones the issue until February next year. Thanks to the temporary solution the expected start of the Fed tapering has also shifted to the mid of next year, which gave a bit of a fresh air to bond markets. The 10 year US Treasury decreased by 15 basispoints from mid October, what the 10 year German government bonds also mimicked. The Italian and Spanish 10 year spreads also tightened significantly throughout the month, but the last week brought some weakening for these securities.

ASSET ALLOCATION OF THE FUND ON 10/31/2013
