## INVESTMENT POLICY OF THE FUND:

The fund is intended to serve as a stable, moderately low-risk form of investment, and to offer investors higher returns than bank deposits over the medium term. The portfolio elements are selected in accordance with the above principles. To ensure liquidity, the fund primarily aims to hold bonds and discount treasury bills issued by the State Debt Management Centre on behalf of the State of Hungary, as well as bonds issued by the National Bank of Hungary. The fund has a low risk profile, but its portfolio may also contain forint-denominated debt securities issued by banks and corporations, which are expected to yield a higher return than government securities. The fund may also keep its liquid assets in bank deposits. Besides this, the fund may hold a limited proportion of foreign-currency instruments in its portfolio, but only subject to the full hedging of currency risk.

## MARKET SUMMARY:

After the weak November levels the market managed to appreciate almost whole December, and closed 30-40 bps lower for longer maturities. Strength of the market was quite surprising given that EURHUF was still above 300. Not to mention that the Fed, after preparing markets for half a year, finally announced tapering of asset purchases from January. Preparation did go well: similarly to the Hungarian bond market most EM bond markets remained strong, although the 10y US treasury yield climbed above 3% by the end of the month which might pose risks. We had neutral position, we sold some bonds in the strength near year-end. The central bank kept on cutting the policy rate, that ended the year at 3%. The curve got somewhat flatter after the buying in the long end.
