Net Asset Value of HUF series:	1,784,139,826 HUF
Net Asset Value per unit:	1.685269 HUF

## INVESTMENT POLICY OF THE FUND:

The fund aims to create an explicitly defensive investment portfolio for its investors, and typically invests in developed-market government bonds, and related exchange-traded derivative transactions, in the interest of achieving the highest possible return with the assumption of currency risk. The fund primarily aims for a portfolio consisting of the publicly issued bonds of foreign governments and foreign-domiciled companies. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, when purchasing international securities the fund only selects publicly issued securities that are listed on foreign stock exchanges. The proportion of non-investment-grade securities is maintained at a low level, and if the planned ratio is overstepped due to the downgrading of a given issuer the fund restores it under the conditions stipulated by the relevant legal provisions. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term. In the course of its operation, however, the fund is managed on the premise that when compiling the portfolio, it is bonds that determine the nature of the fund. Accordingly, the proportion of bonds that may be kept in the fund at any given moment may reach the prevailing statutory maximum. When compiling the bond portfolio, taking into account the macroeconomic environment of the investment markets, the aim is to build up a long-term investment portfolio primarily on the basis of fundamental analyses. To ensure liquidity, the fund may purchase Hungarian government securities (primarily discount treasury bills) and MNB bonds; however, in accordance with the current statutory regulations the proportion of foreign bonds in the portfolio may be up to 100%. The fund management company is permitted, at its own discretion, to hedge all or a part of its currency risks with forward currency positions, in compliance with the statutory conditions.

## MARKET SUMMARY:

After the introduction of the tapering by the Fed in December, investor focus has shifted to the developing countries that were the main beneficiaries of the liquidity pump and now are most vulnerable to the world of scarce liquidity. The political turbulence occurring in Ukraine and Turkey, the USD 500 million wealth product of the Chinese bank, ICBC on which it nearly defaulted and the rather disappointing manufacturing data coming from China were all factors intensifying the fear around emerging markets. The fear has translated into a fast sell-off on the currency- and bond markets at the end of January. The nervous emerging market sentiment has not derailed the Fed on continuing the tapering and the central bank has lowered the pace of quantitative easing by USD 10 billion to USD 65 billion. Despite the tightening monetary policy, the 10-year US treasury bond remained relatively strong during the month and it has sank from the yield of 3% at the beginning of the month to 2.64% by the end of January. The 10-year German Bund has followed this pattern and went from 1.94% to 1.66% by the end of the month. The spreads of the Spanish and Italian 10-year bonds' yields above the German papers' were able to tighten, with Spanish spreads decreasing more (18 basispoints) thanks to the improving economic outlook.

## ASSET ALLOCATION OF THE FUND ON 01/31/2014
