Net Asset Value of HUF series:	1,861,438,632 HUF
Net Asset Value per unit:	1.839252 HUF

## INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields of the Russian equity market, and to profit from Russia's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund's portfolio primarily consists of the publicly issued shares of foreign companies. The main investment targets are the stock exchange-traded shares of companies that maintain an active presence in Russia or the former CIS states, or which generate the bulk of their revenues in these countries. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. The weights, within the portfolio, of shares traded in the Russian market are determined with a view to ensuring that the fund - in line with our expectations with regard to future risks and yields - achieves its objective, which is to outperform the benchmark advertised by the fund, over the longer term. The fund records its assets in forint; the fund management company may, at its own discretion, choose to hedge all or a part of its currency risks with forward currency positions, in compliance with the applicable statutory requirements. Under the current legislation the proportion of shares in the portfolio may be up to 100%.

## RISK INDICATORS FOR THE LAST 12 MONTHS:

Annualized standard deviation of the fund's weekly yields: 20.83 %  
Annualized standard deviation of the benchmark's weekly yields: 20.18 %

## MARKET SUMMARY:

March turned out to be a rollercoaster month for equities. European markets sold off on news of the Russian occupation of Crimea peninsula sparking fears that an escalation of the conflict is imminent. However, probabilities of the worst-case scenarios ranging from an open military conflict to a set of prolonged retaliatory sanctions kept decreasing during the second half of the month which brought some relief. Even though the FED went on with downsizing the QE programme, US markets remained more resilient to the negative newsflow of the unfolding Ukraine crisis to further deteriorating China macro data. Russian equities sold off sharply in the first half of March, but managed to recover some of the losses towards the end of March as tension eased. The integrated oil stocks recover from their initial losses, however several mid-cap companies suffered significant losses.
