Start:	10/29/2007
Currency:	EUR
Total Net Asset Value of the whole Fund:	10,364,236,960 HUF
Net Asset Value of EUR series:	1,070,047 EUR
Net Asset Value per unit:	3.770148 EUR

## INVESTMENT POLICY OF THE FUND:

The objective of the fund is to invest in Central and Eastern European equities. The fund is offered for investors who would like to benefit from the long term performance of regional listed companies. The average equity exposure of the fund is 95%. A primary consideration when compiling the fund's portfolio is the need to optimize the aggregate risk of the securities to be included in the fund. In the interest of reducing the risk, the utmost care is taken when selecting the securities to include in the fund's portfolio. The fund buys shares issued by corporations from countries in the Central European region (primarily Hungary, Poland, the Czech Republic, Romania, Slovenia and Croatia, and secondarily, Austria, Russia and Turkey), but it may also invest in the shares of companies in other emerging and developed countries, as well as in other collective investment securities. The fund may hedge a part or all of its currency risks with forward currency positions. To ensure liquidity the fund aims to hold in its portfolio the government securities on behalf of the State of Hungary and bonds issued by the National Bank of Hungary, but in accordance with the statutory regulations the proportion of shares in the portfolio may be up to 100%.

## MARKET SUMMARY:

Major equity markets performed mixed in January. European indices soared to new all-time highs, boosted by a set of ECB stimulus, while US markets did not manage to appreciate further. Investors focused on sharp FX moves as the EUR kept tumbling to fresh lows against the USD, while the enormous appreciation of CHF induced market turbulences. The relative outperformance of European equities vs. US markets was boosted by a benign set of growth contribution stemming from the weak Euro, the ECB stimulus and the lower oil price environment. On the other hand, US corporate earnings revisions were affected by both adverse FX effects and oil related downward revisions. Oil prices remained volatile throughout January as the selling spree lost momentum with the early signs of a massive downscale in drilling activity. Polish WIG20 index closed the month in the positive territory. The leading indicators signal strong economic growth, however, CHF strength affected negatively FX mortgage loans. Domestic demand strengthened further significantly and industrial production beat the market expectations significantly. However, deflation deepened further and unemployment rate increased again. Chemicals and construction sector performed the best, while banks were the worst performers. The Hungarian and the Czech equity market closed the month with a small plus in EUR terms.
