Net Asset Value of HUF series:	31,726,650,702 HUF
Net Asset Value per unit:	2.580163 HUF

## INVESTMENT POLICY OF THE FUND:

The fund's aim is to assemble an investment portfolio for its investors that is comprised of both Hungarian and international money and capital-market instruments, which the fund can optimise through ongoing dynamic asset allocation in order to attain the highest possible yield. The fund is a 'total-return fund', which means that instead of concentrating on just one subsector of the money or capital market, at any given moment it focuses its investments on the area that holds the promise of the highest possible return. Accordingly, the fund may hold government securities and discount treasury bills issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary, as well as bonds issued by the National Bank of Hungary, and also bank and corporate bonds that are low risk but are nevertheless likely to earn a higher return than government securities. Besides these the fund's portfolio may also contain shares listed on the domestic stock exchange and the bourses of OECD countries, as well as the government securities, bank and corporate bonds of OECD countries. The fund does not follow a fixed benchmark, and does not adhere to a permanent ratio of shares to bonds, but aims to constantly change this ratio within a broad range; indeed, it is also prepared to take on currency risk (just as international bond/equity funds tend to) through the purchase of international government securities and equities. At the same time, the fund maintains the option to hedge currency risks.

## RISK INDICATORS FOR THE LAST 12 MONTHS:

Annualized standard deviation of the fund's weekly yields: 1.89 %

Annualized standard deviation of the benchmark's weekly yields: 0.33 %

## MARKET SUMMARY:

An eventful January rolled into an eventful February: an agreement between the Eurogroup and Greece was finally reached. The agreement fulfils all the terms set out by the Eurozone finance ministers and commits Greece to the current program, in exchange, Greece will be able to make use of undefined "flexibility". Meanwhile on the eastern part of Europe, Ukraine and pro-Russian rebels in the east have signed a ceasefire in Minsk. On the other side of the Atlantic, the minutes from the January FOMC meeting was published, which showed a bit of a dovish tone regarding monetary policy, but Fed's chair, Janet Yellen was quite balanced later in the month in her testimony before the House Financial Services Committee, so the chair provided a little bit for both investors looking for dovish and hawkish comments. The 10 year US Treasury moved from 1,65% to 1,99%, while German Bunds moved from 0,303% to 0,328%. Periphery had a remarkable month in February, as Italian and Spanish 10 year spreads over the German 10 year government paper tightened from 130 and 116 basispoints to 100 and 93 basispoints respectively. Portugal 10 year traded below the US 10yr government paper for the first time.
