Currency:	HUF
Total Net Asset Value of the whole Fund:	5,417,150 EUR
Net Asset Value of HUF series:	1,101,953,434 HUF
Net Asset Value per unit:	1.171389 HUF

INVESTMENT POLICY OF THE FUND:

The aim of the fund is to profit from the return on climate change-related equity market investments, through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund manager's intentions are that the fund's portfolio should consist predominantly of the publicly traded shares of foreign-domiciled companies. The primary investment targets are the securities of companies that earn most of their revenues from exploiting the business opportunities arising from global climate change (environmental management, energy efficiency, clean technologies etc.), harnessing alternative resources (renewable energy, water management, agricultural chemistry etc.) and from agricultural activity (biotechnology, animal husbandry, fish farming, agricultural technology, etc.). When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, the fund primarily buys publicly issued foreign equities that are listed on foreign stock exchanges, and secondarily, it may also invest in shares issued by Hungarian companies. In order to achieve its aim, the fund can hold collective investment vehicles and ETFs in its portfolio. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. The proportions, within the equity investments, of subsectors related to climate change, alternative energy sources and agricultural activity are determined so as to ensure that the fund - in line with our expectations with regard to future risks and yields - fulfils its objective, which is to outperform the thematic global sector index selected as the benchmark over the longer term. The fund records its assets in euro; the fund management company may, at its own discretion, choose to hedge all or a part of its currency risks with forward currency positions, in compliance with the applicable statutory requirements.

MARKET SUMMARY:

Positive mood continued in the markets in December since main equity indices soared without exception during the last month of the year. Apart from the supportive technical picture and improving global growth, record inflow into equities in the US, weakening euro and lower weight in equity positions before the Italian referendum in Europe and declining yen and favorable macro data in Japan helped the markets. There were several interesting actions from central banks in December as both ECB and FED made important decisions in their monetary policy. The European Central Bank extended its QE bond purchases program until next December. However, it reduced its monthly purchases from 80 billion to 60 billion. Investors closed their euro long positions because the announcement differed from the previously expected market consensus. Weaker euro had a positive effect on the European markets. The FED raised its key interest rate by 25 bps to 0,75% which were in line with expectations but Yellen indicated a more hawkish view on the anticipated pace of monetary tightening. As a result, increasing dollar power was a determinant market factor during the month. The strength of dollar fueled fears in emerging markets where market participants worry about a prospective currency crisis. Also, rising US yield put high pressure on emerging countries that have huge amounts of dollar-denominated debt. While Italian Prime Minister Renzi resigned after losing the referendum. Oil prices jumped to their year-to-date highs in December thanks to the positive market environment. Additional production cut and closing of short positions supported the strengthening of the commodity. Industrial and precious metals did not perform well during the month as strong dollar had a detrimental effect on their prices.

Climate change-related markets achieved fine results in December. From a sector perspective renewable energy and utilities bounced back and became top performers during the month, while water related stocks lagged behind.

ASSET ALLOCATION OF THE FUND ON 12/31/2016
