Net Asset Value of HUF series:	4,110,306,978 HUF
Net Asset Value per unit:	1.082813 HUF

INVESTMENT POLICY OF THE FUND:

The objective of the Fund is to provide capital return for the investors within the appropriate risk limits. The aim of the Fund is to achieve the highest possible return for a given risk level by buying undervalued stocks and fixed income assets and selling overvalued instruments. The Fund is allowed to buy shares, bonds and other instruments, to open short positions on the spot market, to take long and short forward and future positions. Moreover, the Fund can trade on the option market. The portfolio of the Fund is separated into three classes according to their investment objective: Instruments of the first class consist of long positions of long term, fundamentally undervalued, and short positions of overvalued equities. The method of stock picking is identical with the applied methods of Aegon equity related funds and mainly concentrate to the CEE regional markets, although the Fund is allowed to invest in other emerging and developed market instruments. The second class of the Fund's instruments implement the top-down equity strategy of Aegon Asset Management Co., mainly with long and short positions on the futures markets. These positions are based on the scores of the so-called "quadrant model", which is the internal asset allocation model of the Asset Management Company. Instruments of the third class involve the fixed income part of the Fund. The aim of the third class is to reach or exceed the performance of the RMAX Index. The target weight of the first and second classes altogether is 45%.

Risk and Reward Profile:

MARKET SUMMARY:

After the slight increase in May, the main equity indices were stagnating in June. Although the technical analyst of JP Morgan expects the culmination in the stock markets during the summer with a correction in Autumn, Deutsche Bank does not project any recession in the next 12 months.

The ECB has reduced its inflation forecast mainly due to the decrease of the oil price. In the British parliamentary elections, the Conservative Party was unable to retain an absolute majority - as a result the Pound decreased sharply. In the second half of the month, the first negotiation and negotiation schedule for Brexit negotiations was launched. In line with expectations, in the second round of the French elections, Emmanuel Macron's party had an absolute majority. At the end of the month, European decision-makers have extended the sanctions against Russia for another 6 months until January 2018.

At the beginning of June, due to the news of rising Libyan production to three-year highs, oil short positions were opened, and by the middle of the month, oil prices decreased led by fears of over-supply; although the launch of the blockade against Qatar had a slight rebounding effect. After the disappointment at the OPEC meeting, oil only returned to level 45 only at the end of the month when it became apparent that the inventory increased by 118k instead of the expected decrease of 2.2 million barrels.

At the beginning of the month, the US long yield dropped to its 2017 low as a result of disappointment with Trump, weak inflation and strengthening yen; furthermore, in the second week of June, Nasdaq turned down. As it was expected, the FED increased the base rate by 25 bps.

In Asia, Japanese market was supported by excellent macro data, while the Chinese H-stocks decreased because of the arrest of Anbang's CEO. In accordance to the MSCI decision in June, the Chinese A-shares were included in MSCI Emerging Market Index, but Argentina was left out.

In June, the fund was moving sideways, the equity exposure was below the long term average. As at the beginning of the month, in line with the decrease in oil prices the Russian market has also decreased, we sold the majority of our Russian exposure which was only bought back selectively at the end of the month. In addition, we also entered into long oil position.

ASSET ALLOCATION OF THE FUND ON 06/30/2017
