Total Net Asset Value of the whole Fund:	17,039,484,690 HUF
Net Asset Value of HUF series:	3,391,777,826 HUF
Net Asset Value per unit:	1.443221 HUF

INVESTMENT POLICY OF THE FUND:

The fund aims to profit from the return on global equity market investments, through share price gains and dividend income. The bulk of its portfolio is made up of the publicly listed shares of foreign companies. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, the fund primarily buys publicly issued foreign securities that are listed on foreign stock exchanges, and secondarily, it may also invest in shares issued by Hungarian companies. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term. However, the fund is managed on the premise that when compiling the portfolio, it is shares that determine the nature of the fund. Accordingly, the proportion of shares that may be kept in the fund at any given moment may reach the prevailing statutory maximum. The fund management company is permitted, at its own discretion, to hedge all or a part of its currency risks with forward currency positions, in compliance with the statutory requirements. When compiling the share portfolio, taking into consideration the macroeconomic environment of the investment markets, the aim is to build up a long-term investment portfolio primarily on the basis of fundamental analyses. In accordance with the current legislation, the proportion of shares in the portfolio may be up to 100%.

MARKET SUMMARY:

However, the US equity market managed to rise in May, the European and Regional equity indices suffered a fall. The Dollar was able to strengthen significantly against the Euro, thus the EURUSD cross reached the 1.151 rate. At the beginning of the month, the US currency was boosted by the record high US export data, while the European geopolitical tension and the widening US-German yield gap have put pressure on the Euro, after the 10-year US government yield hit a 7-year-high and reached the 3.1 level. Last month, the fears of some vulnerable emerging markets' currency crisis came to the light. In May, the Argentine peso weakened by more than 20 percent in one week compared to the Dollar. At the beginning of the month, the foreign exchange intervention did not bring the expected result, thus the local central bank had to raise the base rate to 40% to reduce the pressure on the Argentine currency. Moreover, the Argentine President Macri had to request for an IMF help to save the Peso. Similar situation took place in Turkey in May, the Turkish Lira fell to a new absolute low against the Dollar, which only the local central bank was able to curb somewhat by an extra 300 basis point interest rates raise. The fears of the emerging market currencies also reached Hungary, thus the Forint has weakened over the 320 limit against the Euro, which has not been seen since June 2016.

In Europe, the Italian political tensions were in the limelight. At the end of the month, State-President Mattarella did not endorse Giuseppe Conte's Financial Minister nominee, the euro-skeptic Paolo Savona, in response to this, the League and the Five Star Movement have gave back the mandate of the government formation. Investors were afraid that Italy will leave the Eurozone, thus the Italian 10-year government yield has jumped to levels not seen since 2014.

Overseas, Trump's politics was a real roller coaster. In May, the US president declared that the US will officially quit the nuclear agreement with Iran, which the European countries are trying to maintain. Variable news came on the US-China trade war front as well, in the middle of the month we could hear some news about a cease-fire but by the end of the month, another tariff increase was announced. Similar situation took place in connection with the US-North-Korean summit (planned on June 12), the US president firstly resigned the meeting but by the end of the month, some good news emerged about this issue.

Oil price hit a new 3.5-year high in May, after the market participants worried about a significant downturn in Iran's oil supply, but the end of the month, the investors realized profit before the OPEC/Russian production negotiation.

The fund outperformed its reference index in May, thanks to the fund's US overweighted strategy after the US market managed to outperform in terms of Forint within the developed markets. We hold some overweighted individual US equities in the fund, which also contributed positively to the last month's performance, moreover we managed to realize profit in an oil market related paper before the fall of the oil price.

ASSET ALLOCATION OF THE FUND ON 05/31/2018

Asset type	Weight
Collective securities	70.03 %
International equities	27.61 %
