Net Asset Value of PLN series:	134,291,934 PLN
Net Asset Value per unit:	2.507975 PLN

INVESTMENT POLICY OF THE FUND:

The aim of the fund is to achieve a substantial yield for investors by taking high risks and making active use of derivative positions. The fund is decidedly high-risk, particularly due to the derivative positions it takes. The fund is willing to buy or sell all available investment instruments - domestic and foreign bonds, equities and other securities, indexes and currencies - provided it sees the opportunity to make substantial gains. In this respect the fund belongs in the category of opportunistic funds that pursue a multi-strategy investment approach. Within the multi-strategy approach pursued by the fund, 'global macro', 'long-short equity', 'convertible bond arbitrage' and 'managed futures'-type transactions dominate. In terms of asset class, the fund's investments can be divided into three main groups: it takes on extra risk in the bond, currency and equity markets, and in these markets it is prepared to take up both long and short positions within the maximum limits permitted by law, which currently allow double leverage for funds of this type. In its investment decision-making mechanism the fund assesses fundamental, pricing, technical and behavioural/psychological factors. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term. To ensure liquidity the fund aims to hold government securities issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary.

MARKET SUMMARY:

During July, a slight increase was observable in the price of the main equity indices; both developed and emerging markets managed to increase their value, moreover the US NASDAQ index hit a new historical peak. The second quarterly flash report season started last month, thus market movements were influenced not only by the "trade war" but also by the results of companies. Facebook's shares fell more than 20% after publishing its results because the number of users of the social media site grew less than analysts' expectations.

At the beginning of the month, the "trade war" between Washington and Beijing came to a new level after the tariffs that affect more than 800 Chinese products worth \$34 billion came into effect, in addition, Donald Trump continued to say that the final amount could reach \$550 billion. Nevertheless, by the end of the month the tension decreased, after the Trump-Juncker meeting in Washington ended with the approach of positions that reduced trade-war fears.

In July, Donald Trump and Vladimir Putin met in Helsinki, which was closed without any substantial progress but Trump's contradictory statements made a big turmoil in the American politics.

In Turkey, new negative news have emerged, which put pressure on the performance of the Turkish equity market. In the middle of the month, Fitch downgraded Turkish debt rating to "BB", outlook negative, moreover, the Turkish central bank left the interest rates unchanged, bucking market expectations and causing further lira weakening.

The British people started to lose faith in the success of the May-led Brexit negotiation, which is further enhanced by the resignation of Boris Johnson and David Davis, the Minister of Foreign Affairs and the Brexit Secretary. Although the British Parliament voted for Theresa May's Brexit plan but the EU has rejected May's proposal.

In July, investors realized profit in the oil market, after the US government is willing to negotiate with Iran's oil buyers about the zero oil import from November. Furthermore, OPEC'S (Organization of the Petroleum Exporting Countries) oil production in July hit a new yearly high and grew to 32.64 million barrels a day, which put also pressure on the price of oil.

In July, we closed our short positions in the US and emerging markets, and sold Russian, Polish and Croatian government bonds, while we bought Romanian and Hungarian government bonds. During the month we began to selectively buy regional and Russian equities, while silver long position was also opened. The performance of the fund in July was negatively influenced by the tactical Turkish stock market exposure and the strengthening of the Forint against the developed and regional currencies.
