Currency:	HUF
Total Net Asset Value of the whole Fund:	3,687,361 EUR
Net Asset Value of HUF series:	1,000,675,201 HUF
Net Asset Value per unit:	1.291425 HUF

## INVESTMENT POLICY OF THE FUND:

The aim of the fund is to profit from the return on climate change-related equity market investments, through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund manager's intentions are that the fund's portfolio should consist predominantly of the publicly traded shares of foreign-domiciled companies. The primary investment targets are the securities of companies that earn most of their revenues from exploiting the business opportunities arising from global climate change (environmental management, energy efficiency, clean technologies etc.), harnessing alternative resources (renewable energy, water management, agricultural chemistry etc.) and from agricultural activity (biotechnology, animal husbandry, fish farming, agricultural technology, etc.). When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, the fund primarily buys publicly issued foreign equities that are listed on foreign stock exchanges, and secondarily, it may also invest in shares issued by Hungarian companies. In order to achieve its aim, the fund can hold collective investment vehicles and ETFs in its portfolio. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. The proportions, within the equity investments, of subsectors related to climate change, alternative energy sources and agricultural activity are determined so as to ensure that the fund - in line with our expectations with regard to future risks and yields - fulfils its objective, which is to outperform the thematic global sector index selected as the benchmark over the longer term. The fund records its assets in euro; the fund management company may, at its own discretion, choose to hedge all or a part of its currency risks with forward currency positions, in compliance with the applicable statutory requirements.

## MARKET SUMMARY:

The US stock markets hit a new absolute peak in August, while the European and Emerging markets were characterized by fall; Apple also shows the US market strength as it has reached the 1000 billion dollar market capitalization as the first Western company.

Though in the middle of the month the markets have calmed down somewhat on the news of a possible US-China trade agreement, however, the trade negotiations ended with no material results and America activated the new 25% additional tariffs on \$16 billion worth of 279 Chinese products, moreover an additional \$200 billion worth of import is planned to be further charged.

The most important event in August was the fall in the Turkish currency, which also put pressure on the performance of the Turkish equity market. The main reason for the weak performance of the Turkish stock market over the past period is the break of the investor confidence in the Turkish capital markets and monetary policy. Monetary steps to curb the currency fall and the missing of these actions caused panic among the investors, which led to a dramatic sell-off, the fall of Lira has broken records; the inflation rise rapidly, while the central bank does not raise interest rates, thus the investors question the independence of the central bank.

Russian stocks also suffered a fall in August, caused by the news of the new American sanctions, which are not related to election manipulation but to Scriptural poisoning, thus the Ruble also broke out in the weak direction from its multi-month trading range.

In the middle of the month, the Dollar also began to weaken after Trump criticized the US central bank for interest rate hikes and expressed disappointment with the Chairman of the Federal Reserve.

After several months of negotiations, a bilateral agreement was signed between the USA and Mexico at the end of August, but the US and Canada have not been able to agree on the renegotiation of the North American Free Trade Agreement (NAFTA) yet.

The fund closed the month in the red due the fall of the utility sector, while the water and waste sector indices closed at flat. Although the renewable and agricultural sector rose in August but this could not compensate the weaker performance of the other sectors.

## ASSET ALLOCATION OF THE FUND ON 08/31/2018

Asset type	Weight
