Net Asset Value of HUF series:	2,729,759,499 HUF
Net Asset Value per unit:	2.064301 HUF

INVESTMENT POLICY OF THE FUND:

The fund aims to create an explicitly defensive investment portfolio for its investors, and typically invests in developed-market government bonds, and related exchange-traded derivative transactions, in the interest of achieving the highest possible return with the assumption of currency risk. The fund primarily aims for a portfolio consisting of the publicly issued bonds of foreign governments and foreign-domiciled companies. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, when purchasing international securities the fund only selects publicly issued securities that are listed on foreign stock exchanges. The proportion of non-investment-grade securities is maintained at a low level, and if the planned ratio is overstepped due to the downgrading of a given issuer the fund restores it under the conditions stipulated by the relevant legal provisions. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term. In the course of its operation, however, the fund is managed on the premise that when compiling the portfolio, it is bonds that determine the nature of the fund. Accordingly, the proportion of bonds that may be kept in the fund at any given moment may reach the prevailing statutory maximum. When compiling the bond portfolio, taking into account the macroeconomic environment of the investment markets, the aim is to build up a long-term investment portfolio primarily on the basis of fundamental analyses. To ensure liquidity, the fund may purchase Hungarian government securities (primarily discount treasury bills) and MNB bonds; however, in accordance with the current statutory regulations the proportion of foreign bonds in the portfolio may be up to 100%. The fund management company is permitted, at its own discretion, to hedge all or a part of its currency risks with forward currency positions, in compliance with the statutory conditions.

MARKET SUMMARY:

In December, the US and China were reported to have reached a 'phase-one' trade deal. The Conservatives won a large majority in the UK election. US lawmakers reached a bipartisan deal in principle to avoid a government shutdown. The Fed and the ECB remained on hold and intend to stay that way for a while. Range-trading prevailed during most of the week as markets awaited central bank meetings, the UK election and some direction on trade. In the latter part of the month, sentiment turned more positive. Bond yields inched higher with 10Y Bunds approaching -0.19% and 10Y UST yields reaching close to 1.92%. EUR-USD moved back above 1.12, the CNY fell below 7.00 and the GBP rallied on the back of the election results. Credit spreads tightened across both Europe and the US. Moreover, equities attracted more solid demand and major indices are closing the month 1.5-4.0% higher. We decreased our exposure to the government bonds issued by the US government whilst we bought long-term debt securities issued by the US.

ASSET ALLOCATION OF THE FUND ON 12/31/2019

Asset type	Weight
Government bonds	70.71 %
