INVESTMENT POLICY OF THE FUND:

The fund is intended to serve as a stable, moderately low-risk form of investment, and to offer investors higher returns than bank deposits over the medium term. The portfolio elements are selected in accordance with the above principles. To ensure liquidity, the fund primarily aims to hold bonds and discount treasury bills issued by the State Debt Management Centre on behalf of the State of Hungary, as well as bonds issued by the National Bank of Hungary. The fund has a low risk profile, but its portfolio may also contain forint-denominated debt securities issued by banks and corporations, which are expected to yield a higher return than government securities. The fund may also keep its liquid assets in bank deposits. Besides this, the fund may hold a limited proportion of foreign-currency instruments in its portfolio, but only subject to the full hedging of currency risk. Aegon Domestic Bond Fund must hold minimum 80% of its assets in HUF-denominated bonds issued by the members of European Economic Area.

MARKET SUMMARY:

The coronavirus continues to dominate market moves. From the middle of the month, risk assets experienced a huge sell-off as the market tried to price the economic consequences of the lockdown. This was accompanied by liquidity problems, even on the US treasury bond market, that made the ordinary price discovery process difficult. These developments reached the local bond market quickly. Long yields jumped from 1.8% to 3.5% within a few days. Large central banks announced unprecedented monetary stimuli and liquidity backstops to stop market rout, which helped the Hungarian market to partially recover quick as long yields closed the month around 2.6%, although market liquidity is far below normal. The recovery was also assisted by measures of the NBH aiming at preserving financial market stability. After running procyclical monetary policy recently, the central bank had less room to ease monetary policy, quite the opposite, the weakness of the HUF forced the central bank to tighten monetary conditions on the short end. Short yields respectively jumped, close to the base rate.
