Currency:	PLN
Total Net Asset Value of the whole Fund:	5,581,138,854 HUF
Net Asset Value of PLN series:	7,636,006 PLN
Net Asset Value per unit:	1.219371 PLN

INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields of the Russian equity market, and to profit from Russia's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund's portfolio primarily consists of the publicly issued shares of foreign companies. The main investment targets are the stock exchange-traded shares of companies that maintain an active presence in Russia or the former CIS states, or which generate the bulk of their revenues in these countries. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. The weights, within the portfolio, of shares traded in the Russian market are determined with a view to ensuring that the fund - in line with our expectations with regard to future risks and yields - achieves its objective, which is to outperform the benchmark advertised by the fund, over the longer term. The fund records its assets in forint; the fund management company may, at its own discretion, choose to hedge all or a part of its currency risks with forward currency positions, in compliance with the applicable statutory requirements. Under the current legislation the proportion of shares in the portfolio may be up to 100%.

MARKET SUMMARY:

The second wave of the coronavirus arrived in Europe in September, but the attitude of the governments are radically different from what it was in the spring. It seems that the political leadership is not risking another total economic shutdown, rather, albeit unspoken, they are trying to apply the model that the Swedes used in the spring. The defense against the virus is passed on to people and the political leadership try to pass laws that can slow down the spread of the virus. The chairman of the US Federal Reserve reaffirmed the new monetary policy framework for average inflation outlined in his Jackson Hole speech in September, in which no interest rate hikes are planned until at least 2023 and all means are used to meet monetary policy targets. Contrary to expectations, the dollar began to strengthen against both developed and emerging market currencies. Brexit became the headline news again in Europe after Boris Johnson announced a deadline of 15 October to conclude the Brexit talks, after which they would be ready to leave without an agreement. Experts say "hard-Brexit" is thus again a real alternative. The European economy slowed slightly after the Eurozone Purchasing Managers' Index slowed to 51.9 in August. In China, the economic growth continues after the Caixin's manufacturing PMI jumped to 53.1 in August, and the export orders sub-index became positive for the first time this year. The Caixin service sector PMI rose to 54 in August, continuing to expand in the sector, which now accounts for the bulk of the economy. In Hungary, the MNB surprised the markets when it raised the depo rate by 15 basis points from 60 to 75. Most likely they would like to prevent the forint from weakening further with this move. The EURHUF exchange rate went above 366 after the announcement, but by the end of the month the forint had strengthened slightly. The spread of the coronavirus in Hungary is the second worst in Europe and this also affects the performance of the economy. The MNB has already put together an economic package designed to help the recovery of the Hungarian economy. The fund underperformed in September and underperformed its benchmark. The overweight position in gold remains unchanged as we believe that gold will continue to outperform in the near future. In addition to gold, the fund is also overweight in the retail sector because we believe that the turnaround in this sector is not a short one but also it is the beginning of a long term trend. We continue to maintain a higher-than-usual underweight position in the oil and gas sector, as we believe that growth in this sector is currently limited. A company called Yandex, which was included in the benchmark index last month, is also underweight because we believe the company has become extremely overvalued because it became the member of the index. Also, it was negative for the fund in September, that a diamond mining company called Alrosa performed well last month, but we kept an underweight position in this company.

ASSET ALLOCATION OF THE FUND ON 09/30/2020

Asset type	Weight
International equities	97.84 %
