

MARKET SUMMARY

Now that people are slowly but surely getting back to their pre-Covid way of life, May was finally about when and how economies can re-open. This varied from country to country, depending on the vaccination rates. In Europe, it was England that led the vaccination rate, but fortunately for us, Hungary was also in the top 5 in the world. The question now is how the emergence of the new Indian mutant in Europe will change the re-opening plan. If we are lucky, the Indian version will be more contagious than the typical strain but not as deadly as the English variant was. There also remains the question of whether existing vaccines are effective against the Indian version or whether new vaccines need to be developed. Although the stock markets continued to rally in May, volatility was higher than in April. Investors also felt that stock market averages did not reflect the performance of the real economies, but as long as central banks provide the markets with the current amount of liquidity, there is little chance of any major correction. Investors will therefore be easily jittered if any announcement from central banks suggests that money supply may be tightening. Additionally, there was finally some good news about the corona virus in Hungary. Both the number of cases and the death toll went down in May. This was mainly due to the fact that Hungary had one of the best vaccination rates in the world. The economy was also picking up but at a price. Accumulated demand flooded into the market all at once, which was reflected in higher prices and the inflation forecasts. In May, inflation was over 5% on a year-on-year basis, which got the National Bank's interest. The bank believes that this is a temporary rise, but if it is not, they are prepared to raise interest rates. On hearing this news, the forint strengthened to below 350 against the euro.

The fund achieved a positive return in May. We further reduced the Hungarian interest rate duration at the beginning of the month and then bought Hungarian 5-year bonds at the end of the month as expectations of an interest rate rise revived. On the bond side, we bought Ukrainian and Ghanaian government bonds and bonds of a Russian steel company, while we sold our 5-year US, Ivorian and Intesa bank bonds and increased our bond short position. On the equity side, we further increased our exposure to Brazil, South Africa and the US energy sector. In the Hungarian market, we increased our exposure to OTP and reduced our position in Állami Nyomda. On the FX side, we closed half of our long euro-forint and Brazilian real positions and reopened long ruble positions.

INVESTMENT POLICY OF THE FUND

The fund's aim is to assemble an investment portfolio for its investors that is comprised of both Hungarian and international money and capital-market instruments, which the fund can optimise through ongoing dynamic asset allocation in order to attain the highest possible yield. The fund is a 'total-return fund', which means that instead of concentrating on just one subsector of the money or capital market, at any given moment it focuses its investments on the area that holds the promise of the highest possible return.

Accordingly, the fund may hold government securities and discount treasury bills issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary, as well as bonds issued by the National Bank of Hungary, and also bank and corporate bonds that are low risk but are nevertheless likely to earn a higher return than government securities. Besides these the fund's portfolio may also contain shares listed on the domestic stock exchange and the bourses of OECD countries, as well as the government securities, bank and corporate bonds of OECD countries. The fund does not follow a fixed benchmark, and does not adhere to a permanent ratio of shares to bonds, but aims to constantly change this ratio within a broad range; indeed, it is also prepared to take on currency risk (just as international bond/equity funds tend to) through the purchase of international government securities and equities. At the same time, the fund maintains the option to hedge currency risks.

GENERAL INFORMATION

Fund Manager:	AEGON Hungary Fund Manager Ltd.
Custodian:	Unicredit Bank Hungary Zrt.
Main distributor:	AEGON Hungary Fund Manager Ltd.
Benchmark composition:	100% RMAX Index
ISIN code:	HU0000716030
