

## MARKET SUMMARY

The equity markets continued to rally in June, but as we have written before, volatility is also on the rise. Last month, the SP 500 index fell more than 2% in 3 days, while the Russell 2000 index fell more than 5% during this period. Although both indices recovered their sell-offs, with the SP 500 even managing to reach a new all-time high by the end of the month, one can sense that investor confidence in the markets are waning. This is understandable after the US interest rate decision in June. Up until then, the US Federal Reserve has communicated that they believe inflation is transitory, and that they are sticking to their plan to raise interest rates in 2024-25. This has changed radically in June, when Fed President Jay Powell said that they now see inflation as not transitory, but they do not think it is persistent. As a result, 2- and 5-year bond yields started to rise, while long-term yields went lower. The equity markets were unsure for a couple of days how to interpret the Fed chairman's statements, but in the end the consensus was that inflation may be higher, the coming economic environment may not be as favorable for equities as it has been, but what will not change is that the Fed will do everything it can, to ensure that equity markets will not fall significantly. In Europe, the situation varies from country to country. Although the UK is one of the most vaccinated nation, they have extended the lock down over the past month because of spreading of the delta variant. Other countries are trying to open up their economies, the question is how widespread the new strain of the virus will spread and how much the death rate will increase. European macroeconomic data also shows a steadily improving trend, so politicians will face a difficult choice. If the new strain of the virus becomes too widespread, will they impose austerity again, or will they keep the easing for the sake of the economy. Hungary will continue on the path it has started since mid-May. The economy is opening up, with fewer restrictions for residents to endure. The problem is that the higher-than-expected rise in inflation. Last month the MNB has already indicated that if they see higher and persistent inflation, they will take countermeasures. In June, they made good on their promise by raising the base rate from 60 bp to 90 bp and the one-week depo rate from 75 bp to 90 bp. The forint strengthened back to 350 against the euro as a result. The fund achieved a positive return in June and outperformed its benchmark index. The outperformance was mainly driven by the global environment. When we saw that US treasury yields were turning, we increased the weight of the solar sector and other growth sectors in the fund. Over the past month, the best returns have come from the solar and semiconductor sectors and various big technology stocks. In contrast, the materials and energy transition-related sectors have performed poorly, but we continue to believe that these sectors will perform well going forward. The fund's equity allocation is equally weighted relative to the benchmark index.

## INVESTMENT POLICY OF THE FUND

The objective of the Fund is to benefit from long term, global megatrends. These trends include demographical changes (aging society, emerging markets), efficiency improvements due to depletion of scarce resources (renewable resources, energy efficiency), urbanization, or even technical developments and innovations. To achieving the main objectives, the Fund primary invests in exchange traded funds, secondly in open-end mutual funds. Megatrends are long term changes that will permanently and significantly alter our social and economic environment. The Fund wishes to invest in companies and sectors likely to benefit from these trends. Thanks to its characteristic, the Fund mainly holds sector and thematic ETFs and mutual funds. Megatrends are very long-term, generally global trends, which are spanning economic cycles. Therefore the Fund invests in global markets without any geographical specification. As the Funds profit from very long term trends and exposed heavily to equity markets, we recommend the Fund for long term, risk seeking investors. The type of the Fund is fund of funds, which, according to their investment policy, have to invest in at least 80% of their assets into ETFs and mutual funds. At the same time, the maximum exposure of each fund is not exceeding 20% of their total assets. The Fund only invests in instruments with total expense ratio below 2.5% and intent to maintain the average expense ratio below 1%.

## GENERAL INFORMATION

Fund Manager:	AEGON Hungary Fund Manager Ltd.
Custodian:	Unicredit Bank Hungary Zrt.
Main distributor:	AEGON Hungary Fund Manager Ltd.
Benchmark composition:	100% MSCI AC World Daily Total Return Net USD Index
ISIN code:	HU0000724661
Start:	06/16/2020
Currency:	PLN
Net Asset Value of the whole Fund:	83,072,867 EUR
Net Asset Value of P series:	17,714 PLN
Net Asset Value per unit:	1.362639 PLN
