

INVESTMENT POLICY OF THE FUND

The Fund's aim is to function as a stable, low-risk form of investment, while providing investors with higher returns than they could expect from bank deposits. In order to ensure liquidity, the Fund intends primarily to hold in its portfolio government bonds and discount treasury bills issued by the Government Debt Management Agency (ÁKK) and bonds issued by the National Bank of Hungary (MNB). The weighted average maturity (WAM) of the assets in the portfolio may not exceed 6 months and the weighted average life (WAL) of the assets may not exceed 12 months. The Fund may hold in its portfolio low-risk debt securities issued by banks and companies, which are expected to provide higher returns than government securities and are denominated primarily in HUF, but also in other currencies. The Fund may also invest to a limited extent in government securities or guaranteed bonds issued by the OECD or a G20 country, or any debt security issued or guaranteed by the central government or a regional or local government or the central bank of any EU Member State, or by the European Union, the European Central Bank or the European Investment Bank. The weighted average maturity (WAM) of the assets in the portfolio may not exceed 6 months and the weighted average life (WAL) of the assets may not exceed 12 months. In addition, the remaining time to maturity of each security is a maximum of 2 years and a maximum of 397 days until the nearest interest-rate determination date. The Fund may also keep its liquid assets in bank deposits. The fund may hold a limited amount of foreign currency assets in its portfolio, but only subject to the full hedging of currency risk.

Aegon Moneymarket Fund is not a guaranteed investment. The risk of loss of the principal is to be borne by the investor. An investment in Aegon Moneymarket Fund is different from an investment in deposits, with particular reference to the risk that the principal invested in Aegon Moneymarket Fund is capable of fluctuation. Aegon Moneymarket Fund does not rely on external support for guaranteeing the liquidity of the fund or stabilising the NAV per unit or share.

MARKET SUMMARY

Year-on-year inflation rose by 8.3% in February, despite the market expecting a smaller annual increase of 8.1%. With the forint weakening as a result of the Ukraine-Russia war, the central bank raised the interest rate on one-week deposits by 75 basis points in the first week, which rose further the following weeks (by a total of 155 basis points in March) as interest rate conditions tightened. At the rate-setting meeting, the base rate was also raised by 100 basis points to 4.4%. The central bank's communication was again more hawkish, with a significant correction in the inflation forecast in the March Inflation Report, with the MNB now expecting inflation to be 8.7% this year and 4-5% next year. The economic growth forecast has been revised downwards, to a range of 2.5%-4.5%. The measures have made the forint to stabilize, with the EUR/HUF exchange rate falling from a record high of 400 to 367. During the month, the average yield on 3-month T-bill auctions rose from 4.85% to 5.81%, and, by the end of the month, the volume accepted increased to HUF 50 billion. Interest in the 12-month T-bill auctions was slightly lower, with the last auction selling at an average yield of 6.05%.
