

INVESTMENT POLICY OF THE FUND

The aim of the fund is to benefit on the economical growth of emerging countries. The fund accomplishes this goal basically via individual equity investments, however it may also hold collective investment instruments, if it is necessary for the efficient management of the portfolio. These can primarily be ETFs listed on the stock exchange, and open-end public investment funds. In the course of selecting the equities the Fund dedicates special attention to the compliance of individual companies with ESG (environmental, social, governance) criteria, so in addition to analyzing the financial factors, Portfolio managers also take into consideration environmental, social and governance factors during the investment decision making process. The Fund Manager seeks to build a portfolio in which the positive ESG characteristics of companies prevail, i.e. companies with high ESG scores are overrepresented in the portfolio as compared to companies with low ESG scores. The environmental criterion covers the elements where a business interacts with the environment. Environmental criteria include elements in the course of which the company comes into contact with the environment. These include for example the energy utilization, waste management, pollutant emission and/or the preservation of natural resources. Social criteria include all relations maintained by the company with its external partners, customers and internal employees. Corporate governance criteria are legal factors impacting reliable operation of a company. The Fund's main strategy is to provide broad emerging equity market exposure and to achieve performance above the emerging market index through active equity market allocation. An active strategy enables the Fund to achieve a return in excess of the benchmark. The Fund's risk exposure due to its geographical distribution is close to the benchmark.

MARKET SUMMARY

Although the war between Russia and Ukraine is still ongoing, the investment world is much more concerned about inflation and how central banks will respond to it. Inflation around the world is at multi-decade highs. In the Eurozone it is at levels that is similar the early 2000s, in the US it is at a 40-year high, while Hungary has also not seen such high inflation for more than 20 years. The question on everyone's mind is what central banks will do to curb inflation, and whether they can do anything at all.

In March, the US Federal Reserve raised the Fed Funds rate by 25 basis points, which seems ridiculous in the face of inflation of almost 9%. The Fed is not in an easy position. If it raises rates too high, it could very easily create a recession, but if it raises them by only 25-50 basis points, it could be too slow and inflation could rise further. Let's not forget that over the past decade, the US national debt has more than doubled and a sustained rise in interest rates would be disastrous for the US economy. Europe is not better off. Since the 2008-2009 crisis, the ECB's main task has been to support the bond markets of the South-European countries by continuously buying them. If the ECB also raises interest rates, it will hit the South-European countries very badly, and some of them could enter into bankruptcy.

The MNB continued to raise interest rates in April in response to high inflation figures. In April, the MNB raised the base rate by 100 basis points to 5.40% and the one-week deposit rate to 6.45%. The EURHUF exchange rate was highly volatile in April due to the Russian-Ukrainian conflict. During the month, the forint weakened from 367 to 377 against the euro. Currently, higher interest rates are unable to strengthen the Hungarian currency.

The fund achieved a positive return in April and outperformed its benchmark index. The good performance was mainly due to overweighs in Indonesia and Saudi Arabia. The Fund's strategy in the recent period has been to establish overweighs in emerging market commodity exporting countries, a strategy that contributed significantly to the outperformance. The exposure to the Chinese internet sector has taken away from the Fund's performance. These stocks were already very cheap and the Chinese growth sector pricing have effectively been transformed into a value priced sector. The Chinese government continues to insist on 5.50% GDP growth, but analysts now expect only 4.90%. If the target is to be met, a lot of economic stimulus will have to come in the future. We continue to underweight Korea and the Thailand, and Latin America, Saudi Arabia and Indonesia remain overweight. We are also overweight emerging market small cap stocks. The fund is slightly overweight against the benchmark index at 105%.

GENERAL INFORMATION

Fund Manager:	AEGON Hungary Fund Manager Ltd.
Custodian:	Unicredit Bank Hungary Zrt.
Main distributor:	AEGON Hungary Fund Manager Ltd.
