

## INVESTMENT POLICY OF THE FUND

The Fund's aim is to function as a stable, low-risk form of investment, while providing investors with higher returns than they could expect from bank deposits. In order to ensure liquidity, the Fund intends primarily to hold in its portfolio government bonds and discount treasury bills issued by the Government Debt Management Agency (ÁKK) and bonds issued by the National Bank of Hungary (MNB). The weighted average maturity (WAM) of the assets in the portfolio may not exceed 6 months and the weighted average life (WAL) of the assets may not exceed 12 months. The Fund may hold in its portfolio low-risk debt securities issued by banks and companies, which are expected to provide higher returns than government securities and are denominated primarily in HUF, but also in other currencies. The Fund may also invest to a limited extent in government securities or guaranteed bonds issued by the OECD or a G20 country, or any debt security issued or guaranteed by the central government or a regional or local government or the central bank of any EU Member State, or by the European Union, the European Central Bank or the European Investment Bank. The weighted average maturity (WAM) of the assets in the portfolio may not exceed 6 months and the weighted average life (WAL) of the assets may not exceed 12 months. In addition, the remaining time to maturity of each security is a maximum of 2 years and a maximum of 397 days until the nearest interest-rate determination date. The Fund may also keep its liquid assets in bank deposits. The fund may hold a limited amount of foreign currency assets in its portfolio, but only subject to the full hedging of currency risk.

Aegon Moneymarket Fund is not a guaranteed investment. The risk of loss of the principal is to be borne by the investor. An investment in Aegon Moneymarket Fund is different from an investment in deposits, with particular reference to the risk that the principal invested in Aegon Moneymarket Fund is capable of fluctuation. Aegon Moneymarket Fund does not rely on external support for guaranteeing the liquidity of the fund or stabilising the NAV per unit or share.

## MARKET SUMMARY

Year-on-year inflation rose by 8.5% in March, but surprisingly ended below market expectations of 8.8%. The rise in inflation is mainly due to higher food prices, but the year-on-year increase in services prices is now above 6%. The government announced at the end of April that it would extend the price freeze on both food and fuel until July 1st, so that they can continue to be purchased at fixed levels. At the April rate-setting meeting, the central bank raised the base rate again by 100 basis points, and the one-week deposit rate was also raised by 30 basis points in the subsequent deposit tender. The base rate now stands at 5.4% and the deposit rate at 6.45%. The central bank's communication has remained essentially unchanged, with the size of the tightening to be decided on a monthly basis based on the incoming data. The launch of the rule of law procedure announced at the beginning of the month sent the forint back on a weakening path, but it managed to recover some ground later on. During the month, the average yield on 3-month T-bill auctions did not increase as much as before, rising from 5.84% at the beginning of the month to 5.91% at the end of the month. The volume accepted fell from HUF 50bn to HUF 30bn. Interest in the 12-month T-bill auctions was lower, with the last auction selling at an average yield of 6.39%.
