

INVESTMENT POLICY OF THE FUND

The Fund is an absolute return investment fund that aims to create an investment portfolio through active portfolio management that achieves a return for its clients in excess of the benchmark, taking into account a predetermined risk profile. It intends to accomplish this goal primarily by investing on the bond market of the emerging European region. When implementing the Fund's investment strategy, the Fund Manager focuses primarily on emerging European hard-currency (dollar, euro) government and corporate bonds, leveraging its regional expertise. For diversification purposes, the Fund may also purchase other bonds (government securities, corporate bonds, mortgage bonds) typically issued in the region and denominated in local currency, and in addition, it may also conclude forward and other derivative transactions in order to establish an efficient portfolio. We aim to achieve a moderate risk profile when compiling the Fund's portfolio. The Fund makes its investments based on an extensive analysis of the issuer's creditworthiness, including a comprehensive assessment of the risks involved, especially with regard to non-investment grade issuers. The Fund may only conclude derivative transactions for hedging purposes, or in the interest of improving portfolio efficiency. The Fund may also hold units of non-leveraged collective investment schemes that track derivative indices. The Fund may also take on significant foreign currency exposure, which is normally fully covered by the Fund Manager, but depending on market conditions, the Fund may have an open foreign currency position. The Fund seeks to provide returns to its investors primarily through its bond investments.

MARKET SUMMARY

In July, it was reported that US inflation rose to a forty-year high of 9.1% YoY in June, moreover, price increases were broad-based, and Eurozone's July CPI inflation reached a new record high of 8.9%. As a result, the Fed hiked rates by 75bp but hinted at a slower pace of tightening ahead, and the ECB hiked rates by 50bp and unveiled its Transmission Protection Instrument (TPI), whose main features are potentially unlimited purchases and relatively light conditionality. China's GDP shrank by 2.6% QoQ in the second quarter as lockdowns took a toll. The Eurozone composite PMI fell into negative territory. Gas deliveries via Nord Stream 1 resumed to about 40% of the pipeline's capacity, similar to what was delivered before the shutdown for maintenance work. The IMF worsened its global growth forecasts and warned of the rising risk of a downturn. Russia further reduced gas deliveries via NS1 to about 20% of its capacity. 10Y Bund and UST yields fell by 36bp and 52bp, respectively, amid weak growth data and are back to levels last seen in April. Reinforced by prospects of slower Fed tightening, EUR-USD remained close to 1.02. IG spreads, both financial and non-financial, tightened moderately. Healthy earnings reports and easing fears about excessive policy tightening outweighed growth concerns and helped stock markets recover. The fund still keeps its Ukrainian and the remaining part of the Russian corporate exposure and waits for improvement in the Ukrainian-Russian war, we haven't made changes to the fund's composition.

GENERAL INFORMATION

Fund Manager:	AEGON Hungary Fund Manager Ltd.
Custodian:	Raiffeisen Bank Zrt.
Main distributor:	AEGON Hungary Fund Manager Ltd.
