

INVESTMENT POLICY OF THE FUND

The Fund's aim is to function as a stable, low-risk form of investment, while providing investors with higher returns than they could expect from bank deposits. In order to ensure liquidity, the Fund intends primarily to hold in its portfolio government bonds and discount treasury bills issued by the Government Debt Management Agency (ÁKK) and bonds issued by the National Bank of Hungary (MNB). The weighted average maturity (WAM) of the assets in the portfolio may not exceed 6 months and the weighted average life (WAL) of the assets may not exceed 12 months. The Fund may hold in its portfolio low-risk debt securities issued by banks and companies, which are expected to provide higher returns than government securities and are denominated primarily in HUF, but also in other currencies. The Fund may also invest to a limited extent in government securities or guaranteed bonds issued by the OECD or a G20 country, or any debt security issued or guaranteed by the central government or a regional or local government or the central bank of any EU Member State, or by the European Union, the European Central Bank or the European Investment Bank. The weighted average maturity (WAM) of the assets in the portfolio may not exceed 6 months and the weighted average life (WAL) of the assets may not exceed 12 months. In addition, the remaining time to maturity of each security is a maximum of 2 years and a maximum of 397 days until the nearest interest-rate determination date. The Fund may also keep its liquid assets in bank deposits. The fund may hold a limited amount of foreign currency assets in its portfolio, but only subject to the full hedging of currency risk.

Aegon Moneymarket Fund is not a guaranteed investment. The risk of loss of the principal is to be borne by the investor. An investment in Aegon Moneymarket Fund is different from an investment in deposits, with particular reference to the risk that the principal invested in Aegon Moneymarket Fund is capable of fluctuation. Aegon Moneymarket Fund does not rely on external support for guaranteeing the liquidity of the fund or stabilising the NAV per unit or share.

MARKET SUMMARY

Year-on-year inflation rose by 11.7% in June, again well above market expectations. The rise in inflation was mainly driven by higher food prices, but annual price increases for services and durable goods also accelerated significantly last month. In July, the central bank was forced to raise interest rates again in response to heightened market risks. First, it raised the policy rate by 200 basis points in response to risks in the foreign exchange market, and then, at its regular policy meeting, it raised the policy rate by a further 100 basis points to 10.75%. Barnabas Virág stressed at the post-meeting press conference that the tightening would continue until inflation has peaked, which is likely to be in the autumn. The timing of the inflation peak has hardly changed, but the rate has. At the end of July, the government changed the regulation on the reduction of the utility cost, according to which consumers who consume at or below the average price are entitled to the reduced price. The change could push inflation up by around 3% points, according to the central bank and analysts' calculations, with a peak this year of around 16-17%. Three-month T-bill yields have not quite caught up with the base rate due to strong interest, but have moved somewhat closer to the elevated level. Thus, the average yield on 3-month T-bill auctions rose from 6.27% at the beginning of the month to 8.18% at the end of the month, and the 12-month T-bill auction at the end of the month sold at an average yield of 9.58%. We continue to favor holding shorter-dated paper in the fund until inflation peaks.
